**SHINWA CHEMICAL INDUSTRIES LTD.**

## Packing Material

Packed column and capillary column are used for GC analysis. Packed column is a glass or stainless tube packed with stationary phase coated diatomite. Capillary column are fused-silica or stainless tubing coated or chemically bonded with stationary phase on the inner wall. We would like to introduce our excellent GC Packed materials.

### Support

The support hold the stationary phase and the ideal support is said to have no direct contribution to the separation of samples. According to the characteristics of the support, tailed peak or decomposition of the component are sometimes caused. Therefore, packing material should be chosen for each analytical needs.

The conditions required as supports are as follows:

- 1) Holding stationary phases firmly**
- 2) Having a structure with proper surface area to contribute a good separation**
- 3) Not to adsorb itself the samples, the surface should be inert physically and chemically**
- 4) Excels in mechanical strength and have a good permeability of carrier gas**
- 5) Excels in heat resistance**

In general, diatomaceous earth is used as a GC support. There are two types of brown and white support.

Compared with white support, brown support has large surface area and can be coated with wide range of stationary phases from low concentration to high. The white support has a low surface activity, so even in low concentration coating of the stationary phase, high sensitive analysis are possible without any adsorption and decomposition.

Telephthalic acid, fluoride support and so on are also used according to the analytical requirements.

- 1) Diatomite (brown type, white type)**
- 2) Fluoride beads**
- 3) Quartz**
- 4) Glass beads**
- 5) Telephthalic acid beads**
- 6) Porous polymer beads, carbon**
- 7) Adsorbents (aluminum, charcoal and other GSC supports)**

As the diatomite has a metal oxide and silanol group on the surface, adsorption or decompositon of the samples are caused by the interaction between sample and the surface. To remove metal oxide, acid or base treatment are performed. To weaken the activity of silanol, silanization reagent is used for end capping.

Treatment	Contents of the Treatment
NAW	Non acid washed
AW	Acid washed (neutral in pH)
BT	Base treated (alkaline in pH)
BW	Base washed (neutral in pH)
AW-BW	Acid washed and base treated (alkaline)
AW-DMCS	Acid wasded and DMCS treated (neutral)

## Stationary Phase

### Stationary Phase

The sample vaporized at the sample injection port is separated by the distribution equilibrium between stationary phase and gaseous phase. There are many kind of stationary phases from non-polar (e.g. squalene) to polar (e.g. polyethyleneglycol). The sample and stationary phase that have similar polarity show strong affinity and sample is retained strongly on the stationary phase. There are about 300 kinds of stationary phase for GC.

The characteristics of the stationary phases required for GC are as follows:

- 1) It has low melting point and low vaporized pressure at high temperature so as to keep liquid state at the time of use. Furthermore, having a heat resistance and heat stability.**
- 2) Stable chemically at the time of use. Having a long life time and reproducibility.**
- 3) Small resistance of mass transfer.**
- 4) The quick distribution equilibrium results in the increase of the separation efficiency.**

Category	Class	Appellation
Hydrocarbons	Paraffin hydrocarbons	Apiezon L, Squalane, Hexatriacontane, n-Hexadecane, n-Dodecane
Halogen compounds	Fluorine oils	Kel F Oil No.3, Halocarbon Oil, Fluorolube HG1200
Oxygen compounds	Monoesters	Dibutyl Maleate(DBM), Diethyl Phthalate(DOP), Diethyl Sebacate(DOS), Dinonyl Phthalate(DNP), Flexol 8N8
	Polyesters	FFAP, FON, Thermon-1000, Thermon-3000, 1, 4-BDS, DEGS, DEGA, EGA, EGS, NGS, NGA
	Alcohols	Diglycerol, Hyprose SP-80, Mannitol, Undecanol
	Ethers (Polyesters are contained)	Polyphenyl Ether, Bis(2-butoxyethyl) Phthalate
	Polyglycols	Polyethylenglycols, Ucons
Nitrogen compounds	Amides	Poly-A Series, Versamide900
	Amines	Quadrol, Triethanolamine
	Nitriles	N,N-Bis(2-Cyanoethyl) Formamide(BCEF), 1, 2, 3,-Tris(2-Cyanoethoxy) Propane(TCEP), '-Oxydipropionitrile(ODPN)
	Nitro compounds, Others	Alukaterge T, 4, 4-Azoxidianisol
Silicones	Methylsilicone	SE-30, DC-200, DC-11, DC-410, OV-1, UCW-98
	Methylphenylsilicone	SE-52, OV-17, OV-3, OV-22, DC-550, DC-710
	Methylphenylvinylsilicone	SE-54
	Trifluoropropylsilicone	QF-1, OV-210
	Cyanoalkylmethylsilicone	XF-1150, OV-105(Propyl)
	Cyanopropylphenylsilicone	OV-225
	Others and Compounds	OV-275, Dexsil Series
Sulfur compounds		Dimethyl Sulfide, Polysulfone, Poly-S Series
Phosphorus compounds	Phosphoric Acid Ester	Tricresyl Phosphate(TCP) Trixylenyl Phosphate(TXP)
Salts, Organic acids, Chlorine-compounds		Bentone 34

**Original Support**

Products Name	Characteristics
Shimalite®	Support of diatomaceous earth for high and middle concentration
Shimalite® W	Support of diatomaceous earth for low concentration
Shimalite® TPA	Terephthalic acid support
Shimalite® F	Fluorocarbon polymer (Polytetrafluoroethylene) support
Shimalite® Q	Quartz support
SHINCARBON A	High purity carbon support
Sunpak-A	Porous polymer bead

**Shimalite®**

**Shimalite®** is our original brown colored support which are prepared from high purity diatomite. Shimalite® is available for from low to high boiling point sample.

<b>Shimalite®</b> (Shimalite can keep middle or high concentration of stationary phase on the support) <b>(100ml)</b>				
Mesh size	30 / 60	60 / 80	80 / 100	100 / 120
Treatment	NAW, AW, AW-DMCS, BT			

**Shimalite® W**

**Shimalite® W** is suitable for analyses of biochemical and pharmaceutical samples (steroids, alkaloids, carbohydrates, amino acid and agricultural chemicals).

The surface activity of Simalite W is very small, so the adsorption of samples on the support is very weak even in low concentrarion of stationary phases. It is suitable for small amount and rapid analysis of high boiling temperature and activated substances.

<b>Shimalite® W</b> (The white diatomite for analysis of low concentration stationary phase) <b>(100ml)</b>				
Mesh size	30 / 60	60 / 80	80 / 100	100 / 120
Treatment	NAW, AW, AW-DMCS, BT			

**Shimalite® TPA**

**Shimalite® TPA** is a terephthalic acid support which can be used for the analysis of water contained samples. Shimalite TPA is suitable for the analysis of aldehyde, fatty acid and alcohol having less 7 carbon number in water. It also be used for the analysis of samples which has such strong adsorption as sulfer compounds.

<b>Shimalite® TPA</b> (The maximum temperature of Shimalite® TPA is 185 °C) <b>(100ml)</b>		
Mesh size	30 / 60	60 / 80
Treatment	-	

**Shimalite® F**

**Shimalite®F** is the teflon (4-fluoro ethylene polymer) support. Both Shimalite TPA have a very small surface activity and can be used for the analysis of adsorptive substances such as water.

<b>Shimalite® F (The maximum temperature of Shimalite® F is 210 °C ) (100ml)</b>			
Mesh Size	30 / 60	60 / 80	80 / 100
Treatment	-		

**Shimalite® Q**

**Shimalite® Q** is crystal particles with very small adsorbed activity . It is also used as a resistance tube of reference column.

<b>Shimalite® Q (Quartz support ) (100ml)</b>	
Mesh size	100 / 180
Treatment	Non-treatment, AW-DMCS

**SHINCARBON A**

**SHINCARBON A** is a highly purified carbon support for GC obtained from firing of synthesized polymer and treatment of high deactivity. It has high heat and high water resistance. It can be used for the analysis of water solution containing the substances having low to high boiling point or very small amount substances in the air, which could not be applied on the diatomite, terephthalic acid and teflon support.

**Characteristics**

- 1) This carbon support is highly deactivated. It is very stable in physically and chemically. The polar compounds such as alcohol or fatty acid are not adsorbed on the surface. As it can not be dehydrated, it is suitable for the analysis of the water soluble compounds.
- 2) Support force of the stationary phase and separation ability of SHINCARBON A are equal to diatomaceous earth carrier.
- 3) As it consists of 100% carbon, it can be used at high temperature using deactivated.
- 4) The mechanical strength is strong since the material is the vitreous carbon, and there are no generation of the fine powder. Therefore, the permeability of the carrier gas becomes lower on the column pressure, and the separation efficiency is improved.
- 5) There is no deviation between lots, because they are not natural product like diatomaceous earth but chemical synthesis product.

<b>SHINCARBON A (Inactivated carbon support) (100ml)</b>		
Mesh size	60 / 80	80 / 100
Treatment	-	

**Sunpak-A**

Sunpak-A is the high-performance porous polymer beads highly crosslinked by the original technology. And, the packing materials coated with stationary phase on the Sunpak-A is applied to the separation for such sample as the decomposition and adsorption phenomena is caused on the diatomide as usual.

- 1) Lower hydrocarbons C<sub>1</sub> ~ C<sub>3</sub> in water-content sample. It is possible to analyze lower alcohols C<sub>2</sub> ~ C<sub>7</sub> and inorganic gas CO<sub>2</sub>.
- 2) It is excellent in the microanalysis in the organic solvent.

<b>Sunpak-A</b> (Porous polymer beads)	(50ml)
Max. Temp.	250

**CATALYST FOR THE REDUCTION****Shimalite®-Ni (Catalyst for the reduction )**

- 1) It is catalytic particles which has the thin layer of the metallic nickel structure on the diatomaceous earth particle surface for the reduction.
- 2) It is effective as a reducing agent to convert the material which does not have the sensitivity for hydrogen flame ionization detector (FID) such as carbon dioxide (CO<sub>2</sub>) and carbon monoxide (CO) into methane (CH<sub>4</sub>).

<b>Shimalite®-Ni</b> (Reduced)	(20ml)
It is the catalyst for the high sensitive analysis (the ppm level) by methane conversion of carbon monoxide, carbon dioxide, formaldehyde, and so on	

**GLASS BEADS (Non porous glass beads )**

<b>GLASS BEADS</b> (Non porous glass beads)	(100g)
Mesh size	15 / 30
Treatment	Strontium hydroxide
	Alkaline
	-

## Support

### Import Support

Chromosorb W (100ml)				
Mesh size	30 / 60	60 / 80	80 / 100	100 / 120
Treatment	NAW, AW, AW-DMCS, HP			
	-	HP		

Chromosorb G (100ml)				
Mesh size	45 / 60	60 / 80	80 / 100	100 / 120

Treatment	U, A, AS			

C-22 (100ml)				
Mesh size	30 / 60	60 / 80	80 / 100	100 / 120
Teratment	NAW, AW, AW-DMCS			

## Porous polymer Beads

### High Performance Porous Polymer Beads

Sunpak-A (50ml)		
P/N	Mesh size	Max Temp
S-98	50 / 80	250

P/N	Stationary phase	Max Temp	%	Polarity	Supprt	Application	
A-42	Apiezon + KOH	220 250	5 + 1	Non	Sunpak-A	Low amines	
F-17	Fon		5	Strong		Lower fatty acids	
T-86	Thermon 1000 + KOH		5 + 3			Lower diamines	
T-87	Thermon 1000 + KOH		5 + 1			Amino alchol	
T-88	Thermon 1000		5			Solvents in water	
T-89	Thermon 3000 + KOH		5 + 1			Lower amines	

Sunpak-S (50ml)		
P/N	Max temp	Application
S-125	190	Hydrogen sulfide and carbonyl sulfide in hydrocarbons (C <sub>1</sub> – C <sub>4</sub> )

### TENAX® TA

**TENAX® TA** is suitable for the analysis of alcohols, glycols, diols, amines and high boil point and polar compounds. But it's not suitable for analysis of the hydrocarbons.  
It's also useful as a trap material to collect the atmospheric organic compounds such as styrene monomer in air.

TENAX-TA	
Max temp	375
Mesh size	20/35, 35/60, 60/80, 80/100
Capacity	5g, 8g, 15g

- ( TENAX® TA is 2,6-diphenyl-p-phenylen oxide based porous polymer having a weak polarity.  
Maximum operating temperature is 375 . )

## Porous Polymer Beads

Porapak® (Made in Waters Corporation)				
Type	Max temp	Volume	Mesh size	Application
Porapak-P	250	20g	50/80 80/100 100/120	Carbonyl compounds (Low polarity), Glycols, Alcohols(slightly-polar column)
Porapak-Q		26g		O <sub>2</sub> in N <sub>2</sub> , and organic compounds in aqueous hydrocarbons (versatility purpose column)
Porapak-R		24g		Ethers, Esters, Water from aqueous Cl <sub>2</sub> and HCl (Mid-polar column)
Porapak-S		26g		Alcohols (iso- and normal- type )
Porapak-PS		20g		Aldehydes, glycols (low-tailing type-P column)
Porapak-QS		26g		Organic acids, Polar compounds easy to cause Tailing (low-tailing type-P column)
Porapak-N		29g		CO <sub>2</sub> , NH <sub>3</sub> , Water, Acetylene gas from C <sub>2</sub> -hydrocarbons
Porapak-T		31g		Formaldehyde in water (High polarity)

### Polymer Type

**P : Styrene - Divinylbenzene**

**Q : Ethylvinylbenzene – Divinylbenzene**

**R : Vinylpyrrolidone**

**S : Vinylpyridone**

**N : DVB - EVB – Ethyleneglycoldimethacrylate**

**T : EGDMA**

Chromosorb Century Series (Made in Celite Corporation)					
Type	Max temp	Volume	Mesh size	Application	
101	275	25g	50/80	Water, Free fatty acids, Glycols, Alcohols	
102	250			Oxygen compounds, Permanent gases	
103	275			Amines, amides, Hydrazine, Ketones, Alcohols	
105	250		80/100	CO <sub>2</sub> , NH <sub>3</sub> , Water, Acetylene gas from C <sub>2</sub> -hydrocarbons	
106				Lower fatty acids(C <sub>2</sub> ~ C <sub>5</sub> ), Lower Alcohols(C <sub>2</sub> ~ C <sub>5</sub> )	
107			100/120	Formalin	
108				Polar compounds, Water, Alcohols, Aldehydes, Glycols	

### Polymer type

**101 : Styrene - Divinylbenzene**

**102 : Styrene - Divinylbenzene**

**103 : Cross - Linked Polystyrene**

**105 : Polyaromatic**

**106 : Cross - Linked Polystyrene**

**107 : Cross - Linked Acrylic Ester**

**108 : Cross - Linked Acrylic**

## Packing Material

We have many standard packing materials in order to satisfy your analytical demand. The item marked P/N in the table is the standard materials. The other are special ordered packing materials.

P/N	Stationary Phase (Operation Temparature )	Polarity	%	Support	Mesh Size	Treatment	Capacity	Application
<b>A</b>								
	Acetyl Tributyl Citrate (-25 ~ 180) (Citroflex A-4)	High	1 ~ 25	Support you asked for			100ml	
A-40	Advance-DS (30 ~ 230)	-	5 1 ~ 25	Chromosorb W Support you asked for	80/100	AW-DMCS	50ml	Free fatty acids Organic acids Fatty acid methyl-esters Acetylated suggar
A-41	Advance-DS + H <sub>3</sub> PO <sub>4</sub> (30 ~ 230)	High	2+0.5	Chromosorb W	80/100	AW-DMCS	50ml	Chloric pesticide
	Alkaterge T (10 ~ 70)	High	1 ~ 25	Support you asked for			100ml	Lower amines
	Apiezon H (20 ~ 300)	Non	1 ~ 10 10 <	Support you asked for			100ml	High boiling point-compounds
A-10 A-35 A-43 A-44 A-45 A-46 A-47 A-48 A-49 A50	Apiezon L (20 ~ 300)	Non	25 25 20 10 10 10 5 5 5 1 ~ 10 10 <	Shimalite Shimalite Chromosorb W Shimalite W Chromosorb W Chromosorb W Shimalite W Shimalite W Chromosorb W Chromosorb W	60/80 80/100 60/80 60/80 60/80 80/100 60/80 80/100 60/80 80/100	NAW NAW AW-DMCS AW-DMCS AW-DMCS AW-DMCS AW-DMCS AW-DMCS AW-DMCS AW-DMCS	100ml	High boiling point-compounds
				Support you asked for				
A-42 A-51			5+1 20+10	Sunpak-A Chromosorb W	50/80 60/80	AW-DMCS	50ml 100ml	Lower amines Amines
A-52	Apiezon L + Na Capronate (30 ~ 300)	Non	20+10	Chromosorb W	60/80	AW-DMCS	100ml	Nitrile, Dinitrile
A-24	Apiezon M (20 ~ 275)	Non	25 1 ~ 10 10 <	Shimalite Support you asked for	60/80	NAW	100ml	High boiling point-compounds
	Apiezon M (20 ~ 250)	Non	1 ~ 10 10 <	Support you asked for			100ml	High boiling point-compounds
	Apiezon M (20 ~ 250)	Non	1 ~ 10 10 <	Support you asked for			100ml	High boiling point-compounds
	Apiezon Wax W (20 ~ 250)	Non	1 ~ 25	Support you asked for			100ml	High boiling point-compounds
A-53 A-54	10 10 1 ~ 25	Shimalite W Chromosorb W Support you asked for	60/80 60/80	AW-DMCS AW-DMCS	100ml	Amines Nitriles		
		Support you asked for			100ml	Lower Hydrocarbons		

## Packing material

P/N	Stationary Phase (Operation Temparature )	Polarity	%	Support	Mesh Size	Treatment	Capacity	Application
	4,4'-Azoxydianisole (30 ~ 150)	Mid	1 ~ 10 10 <	Support you asked for			100ml	Aromatic-hydrocarbons
	4,4'-Azoxydiphenetole (135 ~ 150)	Low	1 ~ 10 10 <	Support you asked for			100ml	
<b>B</b>								
	Bentone 34 (60 ~ 200)	Mid	1 ~ 25	Support you asked for			100ml	
B-19	Bentone 34 + DNP (60 ~ 150)	Mid	5+5	Shimalite	80/100	NAW	50ml	Aromatic hydrocarbon isomers, especially-xylene isomer
B-22	Bentone 34 + DDP (60 ~ 150)	Mid	1 ~ 25	Support you asked for			100ml	Xylene isomers
B-37	Bentone 34 + Silicone DC-200 (50 ~ 200)	Low	5+5	Chromosorb W	60/80	AW-DMCS	100ml	Xylene isomers
B-32	Bentone 34 + DIDP (60 ~ 150)	Mid	5+5	Shimalite	80/100	NAW	100ml	Xylene isomers
	7,8-Benzoquinoline (30 ~ 100)	High	1 ~ 10 10 <	Support you asked for			100ml	Aromatic hydrocarbon isomers
	Bees Wax (30 ~ 110)	Low	1 ~ 25	Support you asked for			100ml	Alchol, Esters
	Bendyl Cyanide (Phenyl-Acetonitrile) (0 ~ 50)	High	1 ~ 25	Support you asked for			100ml	Hydrocarbons (olefine and parafine)
B-17	Benzyl Cyanide+AgNO <sub>3</sub> (0 ~ 50)	High	35	Shimalite	60/80	NAW	100ml	Hydrocarbons (olefine and parafine)
B-7	Benzyl Diphenyl (30 ~ 100)	Low	25 1 ~ 10 10 <	Shimalite	60/80	NAW	100ml	Hydrocarbons Support you asked for
B-27	N,N'-Bis(2-Cyanoethyl) Formamide (20 ~ 125)	High	15 1 ~ 10 10 <	Shimalite	60/80	NAW	100ml	Hydrocarbons Support you asked for
	Bis(2-Ethoxyethyl) Sebacate (~ 150)	High	1 ~ 10 10 <	Support you asked for			100ml	
	Bis(2-Ethylhexyl)Tetrachloro Phthalate (0 ~ 150)	Mid	1 ~ 10 10 <	Support you asked for			100ml	
	N,N'-Bis(p-Methoxybenzylidene)-, '-bi-p-Toluidine(BMBT) (180 ~ 200)	-	1 ~ 10 10 <	Support you asked for			100ml	
	Bis(2-Buthxyethyl)Phthalate (BBEP) (30 ~ 175)	Mid	1 ~ 25	Support you asked for			100ml	Hydrocarbons

## Packing Material

P/N	Stationary Phase (Operation Temperature )	Polarity	%	Support	Mesh Size	Treatment	Capacity	Application		
	Bis(2-Methoxyethyl Adipate) (BMEA) (20 ~ 80)	Mid	1 ~ 10 10 <	Support you asked for			100ml	Hydrocarbons		
BMEE (See Tetraethyleneglycol Dimethyl Ether)										
	1,4-Butanediol Adipate (1,4-BDA) (30 ~ 210)	High	1 ~ 25	Support you asked for			100ml	Fatty acid esters		
B-28	1,4-Butanediol Succinate (1,4-BDS) (50 ~ 210)	High	20	Shimalite	60/80	AW		Fatty acid esters		
B-18			20	Chromosorb W	60/80	AW				
B-33			10	Shimalite W	60/80	AW-DMCS				
B-34			10	Chromosorb W	60/80	AW-DMCS	100ml			
B-35			5	Shimalite W	60/80	AW-DMCS				
B-36			5 1 ~ 25	Chromosorb W	60/80	AW-DMCS				
	Support you asked for									
B-29	1,4-Butanediol Succinate-HG (50 ~ 190)	High	20	Chromosorb W	80/100	AW-DMCS		Alkyl mercury-compounds		
B-30			10	Chromosorb W	80/100	AW-DMCS	100ml	Phenyl mercury-compounds		
C										
Carbowax (See Polyethyleneglycol)										
	Carnauba Wax (90 ~ 200)	Mid	1 ~ 25	Support you asked for			100ml	Hydrocarbons		
C-10	Castor Wax (90 ~ 200)	Mid	20 1 ~ 25	Shimalite	60/80	NAW		High boiling point-compounds		
	Support you asked for									
	Citroflex 4(Tributyl Citrate) (30 ~ 150)	Mid	1 ~ 25	Support you asked for			100ml	Alcohols, Esters Aromatic-hydrocarbons		
C-3	Cyclohexanedimethanol Succinate(CHDMS) (20 ~ 250)	Mid	20	Shimalite	60/80	AW				
C-9			10	Shimalite W	60/80	AW				
C-2			5	Shimalite W	60/80	AW		High boiling point-compounds		
C-8			1.5 1 ~ 10 10 <	Chromosorb W	60/80	AW-DMCS	100ml	Fatty acid esters		
	Support you asked for									
D										
	Daifloil No.3 (0 ~ 50)	Non	1 ~ 25	Support you asked for			100ml	Corrosion compounds		
	Daifloil No.10 (0 ~ 50)	Non	1 ~ 25	Support you asked for			100ml	Corrosion compounds		
	Daifloil No.100 (0 ~ 50)	Non	1 ~ 25	Support you asked for			100ml	Corrosion compounds		
D-88	Dexsil 300GC (50 ~ 500) (DMCS-HP 350 )	Non	2	Chromosorb W	80/100	HP		Triglycerides		
D-89			2	Chromosorb W	80/100	AW		High boiling point-compounds		
	Support you asked for									
	1 ~ 2 2 <									

## Packing Material

P/N	Stationary Phase (Operation Temparature )	Polarity	%	Support	Mesh Size	Treatment	Capacity	Application
D-90			2	Chromosorb W	80/100	HP		High boiling point-compounds
D-91	Dexsil 400GC (20 ~ 400) (DMCS-HP 350 )	Low	2 1 ~ 2 2 <	Chromosorb W	80/100	AW	100ml	Support you asked for
	Dexsil 410GC (20 ~ 400) (DMCS-HP 350 )	Mid	2 2 1 ~ 2 2 <	Chromosorb W	80/100	HP	100ml	Support you asked for
D-6	Dibutyl Maleate(DBM) (-10 ~ 50)	High	25	Shimalite W	60/80	NAW		
D-84			25 1 ~ 25	Shimalite W	80/100	NAW	100ml	Support you asked for
D-10	DBM + ODPN (0 ~ 50)	High	35 (95:5)	Shimalite	60/80	NAW	100ml	
D-11	DBM + Propylene Carbonate (0 ~ 30)	High	35 (35:65)	Shimalite	60/80	NAW	100ml	
	Dibutyl Phthalate(DBP) (20 ~ 100)	Mid	1 ~ 25		Support you asked for		100ml	hydrocarbons Esters
	Dibutyl Sebacate(DBS) (20 ~ 70)	Mid	1 ~ 25		Support you asked for		100ml	hydrocarbons Esters
D-69	Didecyl Phthalate(DDP) (10 ~ 125)	Mid	20 1 ~ 25	Shimalite	60/80	NAW	100ml	hydrocarbons Esters
	Diethylene Glycol(DEG) (20 ~ 50)	High	1 ~ 25		Support you asked for		100ml	hydrocarbons Esters
D-70			15	Shimalite	60/80	AW		Fatty acid esters
D-81	Diethyleneglycol Adipate (DEGA)(20 ~ 225)	High	10	Chromosorb W	60/80	AW		
D-1			5 1 ~ 25	Shimalite W	60/80	AW	100ml	Support you asked for
	Diethyleneglycol Isophthalate(DEGIP) (20 ~ 200)	High	1 ~ 25		Support you asked for		100ml	Fatty acid esters
	Diethyleneglycol Sebacate(DEGSe) (30 ~ 210)	High	1 ~ 25		Support you asked for		100ml	High boiling point-compounds Fatty acid esters
D-23	Diethyleneglycol Succinate(DEGS) (20 ~ 225)	High	25	Shimalite	60/80	AW		Fatty acid esters
D-123S			25	Celite 545	60/80	AS		
D-60S			25	Chromosorb W	60/80	AW-DMCS		
D-25			15	Shimalite	60/80	AW		
D-85			15	Shimalite	80/100	AW		
D-125S			15	Celite 545	60/80	AS	100ml	
D-86S			15	Shimalite W	80/100	AW-DMCS		
D-58			15	Chromosorb W	60/80	AW		
D-58S			15	Chromosorb W	60/80	AW-DMCS		
D-87S			15	Chromosorb W	80/100	AW-DMCS		
D-26S			10	Shimalite W	60/80	AW-DMCS		

## Packing Material

P/N	Stationary Phase (Operation Temparature )	Polarity	%	Support	Mesh Size	Treatment	Capacity	Application
D-27S	Diethyleneglycol Succinate(DEGS) (20 ~ 225)	High	5	Shimalite W	60/80	AW-DMCS		Fatty acid esters
D-82S			5	Chromosorb W	60/80	AW-DMCS	100ml	
			1 ~ 25	Support you asked for				
D-73S	Diethyleneglycol Succinate + H <sub>3</sub> PO <sub>4</sub> (DEGS + H <sub>3</sub> PO <sub>4</sub> ) (20 ~ 225)	Mid	10+1	Chromosorb W	60/80	AW-DMCS		Organic acids
D-28S			5+1	Chromosorb W	60/80	AW-DMCS	100ml	Organic acid-antiseptics
D-28			5+1	Chromosorb W	60/80	AW		
D-74			2+0.5	Chromosorb W	80/100	AW-DMCS		Chloric pesticide
D-54	Diglycerol (20 ~ 150)	High	25	Shimalite	60/80	NAW	100ml	Esters, Alcohols
			1 ~ 25	Support you asked for				
D-80	Diglycerol + Tetraethylene Pentamine + KOH (20 ~ 80)	High	15+15+ 2	Chromosorb W	80/100	AW-DMCS	100ml	Lower amines
	Diisodecyl Phthalate (DIDP)(20 ~ 150)	Mid	1 ~ 25	Support you asked for				Hydrocarbons Lower alcohols
	Diisopropyl Phthalate (DIPP) (20 ~ 150)	Mid	1 ~ 25	Support you asked for				Hydrocarbons
	Dilauryl Phthalate(DLP) (20 ~ 70)	Mid	1 ~ 25	Support you asked for				Hydrocarbons Lower alcohols
D-12	Dimethyl Formamide (DMF)(-10 ~ 30)	High	50	Shimalite	60/80	NAW	100ml	Lower hydrocarbons
			1 ~ 50	Support you asked for				
D-8	Dimethyl Sulfolane (DMS)(-10 ~ 50)	High	25	Shimalite	60/80	NAW		Lower hydrocarbons
D-9			25	Shimalite	80/100	NAW	100ml	
			1 ~ 10	Support you asked for				
			10 <	Support you asked for				
	Dimethyl Sulfoxide(DMSO) (-10 ~ 50)	High	1 ~ 25	Support you asked for				100ml Lower hydrocarbons
D-14	Dinonyl Phthalate (DNP)(0 ~ 150)	Mid	25	Shimalite	60/80	BT		
D16			25	Shimalite	80/100	BT	100ml	
D15			5	Shimalite	60/80	BT		Esters Alcohols
D-45			5	Shimalite	60/80	BT		
			1 ~ 25	Support you asked for				
D-78	Dinonyl Phthalate + H <sub>3</sub> PO <sub>4</sub> (DNP+H3P4)(0 ~ 150)	Mid	6+1	Chromosorb W	60/80	AW-DMCS	100ml	Phenols
	Diocetyl Adipate (20 ~ 150)	Mid	1 ~ 25	Support you asked for				100ml Esters, Alcohols
D-126	Diocetyl Phthalate [Di(2-Ethylhexyl) Phthalate] (DOP) (20 ~ 150)	Mid	30	Chromosorb W	80/100	AW-DMCS		
D-17			25	Celite 545	60/80	AS		
D-18			25	Chromosorb W	60/80	AW-DMCS	100ml	
D-124			20	Shimalite	60/80	AW		Esters, Alcohols
D-127			10	Shimalite	80/100	AW		

## Packing Material

P/N	Stationary Phase (Operation Temparature )	Polarity	%	Support	Mesh Size	Treatment	Capacity	Application
D-128	Diethyl Phthalate [Di(2-Ethylhexyl) Phthalate] (DOP) (20 ~ 150)	Mid	10 1 ~ 25	Chromosorb W Support you asked for	80/100	AW-DMCS	100ml	Esters, Alcohols
D-4 D-62	Octoil S (Diethyl-Sebacate) [Di(2-Ethylhexyl) Sebacate] (DOS) (0 ~ 140)	Mid	25 20 1 ~ 25	Shimalite Chromosorb W Support you asked for	60/80 60/80	NAW AW	100ml	Esters, Alcohols
D-19	DOP-B (50 ~ 120)	Mid	30	Shimalite	60/80	NAW	100ml	The thinner- containing alcohols
	n-Dodecane (-10 ~ 30)	Non	1 ~ 25	Support you asked for			100ml	Lower hydrocarbons
	Dodecylbenzene Sulfonic Acid Sodium Salt (20 ~ 150)	High	1 ~ 25	Support you asked for			100ml	Solvents Phenols Cresols
<b>E</b>								
	ECNSS-M(Ethylene Succinate Cyanoethyl Silicone Polymer) (50 ~ 220)	Low	1 ~ 5	Support you asked for			100ml	
	ECNSS-S is similar (50 ~ 190)		5 <					Monosaccharide Fatty acid- methylesters
E-24	EGSS-X (50 ~ 225)	Low	10 1 ~ 5 5 <	Chromosorb W Support you asked for	60/80	AW-DMCS	100ml	Fatty acid esters
	EGSS-Y (50 ~ 210)	Low	1 ~ 5 5 <	Support you asked for			100ml	Monosaccharide Fatty acid- methylesters
E-25 E-26	EPON 1001(Epoxyresin) (50 ~ 200)	High	10 10 1 ~ 25	Shimalite W Chromosorb W Support you asked for	60/80 60/80	AW-DMCS AW-DMCS	100ml	Compound- containing oxygen
E-13	Ethofat 60/25 (20 ~ 120)	Low	20 1 ~ 10 10 <	Shimalite F Support you asked for	20/80	AW-DMCS	100ml	Aldehyde Alcohols Esters
	Ethylacetooacetate (-10 ~ 30)	Low	1 ~ 25	Support you asked for			100ml	Low boiling point- compounds
E-5 E-27 E-28 E-29 E-30 E-31	Ethyleneglycol Adipate(EGA) (50 ~ 225)	High	25 20 10 10 2 0.5 1 ~ 25	Shimalite Chromosorb W Shimalite W Chromosorb W Chromosorb G Chromosorb W Support you asked for	60/80 60/80 60/80 60/80 60/80 80/100	AW AW-DMCS AW-DMCS AW-DMCS AW-DMCS AW		Fatty acid esters  Pesticide residue Amino acid

## Packing Material

P/N	Stationary Phase (Operation Temparature )	Polarity	%	Support	Mesh Size	Treatment	Capacity	Application
E-7	Ethyleneglycol Sebacate(EGSe) (50 ~ 225)	High	15 1 ~ 25	Shimalite F Support you asked for	20/80		100ml	Compound-containing oxygen Alcohols
E-3	Ethyleneglycol Succinate (EGS) (50 ~ 225)	High	25 20 10 10 1 ~ 25	Shimalite Chromosorb W Shimalite W Chromosorb W Support you asked for	60/80 60/80 60/80 60/80	AW AW-DMCS AW-DMCS AW-DMCS

E-34								
<b>F</b>								
F-2	FAL-M(20 ~ 80) (30 ~ 210)	Low	25 12	Chromosorb W Shimalite	80/100 80/100	AW-DMCS H <sub>3</sub> PO <sub>4</sub> AW-DMCS		
F-3	(30 ~ 0)		10	Shimalite TPA	30/60		100ml	Lower free fatty acids
F-1	(30 ~ 210)		10	Shimalite TPA	60/80			Lower free fatty acids-in water
F-7	(30 ~ 210)		10	SHINCARBON A	80/100			
F-18	(30 ~ 210)		10					
F-5	FAP-S (30 ~ 180)	Mid		Chromosorb W	60/80	AW	100ml	Cresol, Xylenol, Alkylphenols
F-8	FFAP (Free Fatty Acid Polyester) (30 ~ 275)	High	10 1 ~ 10 10 <	Shimalite TPA Support you asked for	60/80		100ml	General solvents Fatty acids
F-19	FFAP + H <sub>3</sub> PO <sub>4</sub> (30 ~ 250)	High	0.3 + 0.3	Graphite Carbon	60/80		10g	Lower free fatty acids
F-16	Flexol 8N8 (20 ~ 150)	Low	25 1 ~ 10 10 <	Chromosorb W Support you asked for	60/80	AW-DMCS	100ml	Ethyleneoxide Propyleneoxide
F-13	FON (20 ~ 250)	High	20 20 10 10 5 1 ~ 10 10 <	Celite545 Chromosorb W Celite545 Chromosorb W Sunpak-A Support you asked for	80/100 80/100 800/100 80/100 50/80	A AW-DMCS A AW-DMCS 50ml		Free fatty acids Organic acids Higher alcohols Styrene monomer-in the resin General solvents-in water
G								
	Glycerol (20 ~ 100)	High	1 ~ 25	Support you asked for			100ml	Alcohols
	Glutaronitrile (20 ~ 100)	High	1 ~ 10 10 <	Support you asked for			100ml	Lower hydrocarbons
<b>H</b>								
H-6	n-Hexadecane (0 ~ 50)	non	25 1 ~ 25	Shimalite Support you asked for	60/80	NAW	100ml	Lower hydrocarbons (Boiling point order-elution)

## Packing Material

P/N	Stationary Phase (Operation Temparature )	Polarity	%	Support	Mesh Size	Treatment	Capacity	Application
H-14	Hexamethyl Phosphoramide (-10 ~ 35)	Mid	25 1 ~ 25	Shimalite Support you asked for	60/80	NAW	100ml	
H-2	Hexatriacontane (50 ~ 100)	Non	30 1 ~ 10 10 <	Shimalite Support you asked for	60/80	NAW	100ml	Hydrocarbons
H-16	High Vacuum Greese (20 ~ 180)	Non	25	Shimalite	60/80	NAW		Hydrocarbons
H-19			20 1 ~ 25	Chromosorb W Support you asked for	60/80	AW-DMCS	100ml	
H-21	Hyprose SP-80 (20 ~ 150)	Non	10	Shimalite W	60/80	AW-DMCS		Purfumes and- Refined oils
H-22		Non	10 1 ~ 25	Chromosorb W Support you asked for	60/80	AW-DMCS	100ml	
<b>I</b>								
I-5	Igepal CO-880 (20 ~ 200)	Low	10	Shimalite W	60/80	AW-DMCS		Compounds-containing oxygen
I-6			10 1 ~ 25	Chromosorb W Support you asked for	60/80	AW-DMCS	100ml	Esters
	Igepal CO-990 (50 ~ 220)	Low	1 ~ 25		Support you asked for		100ml	Alcohols, Ketones Esters
	, '- Iminodipropionitrile (20 ~ 100)	Mid	1 ~ 25		Support you asked for		100ml	Hydrocarbons
	Isophthalic Acid (10 ~ 100)	Mid	1 ~ 25		Support you asked for		100ml	Carbonic acids
	Isoquinoline (0 ~ 50)	Mid	1 ~ 25		Support you asked for		100ml	Lower hydrocarbons
<b>J</b>								
J-1	JXR Silicone (30 ~ 300)	Non	2	Shimalite W	60/80	AW-DMCS		
J-2			1.5 1 ~ 10 10 <	Chromosorb W Support you asked for	60/80	AW-DMCS	100ml	High boiling- temperature- compounds
<b>K</b>								
K-1	Kel F Oil No.3 (0 ~ 50)	Mid	10 1 ~ 10 10 <	Shimalite F Support you asked for	20/80		100ml	Halogenide
K-2	Kel F Oil No.10 (0 ~ 100)	Mid	10 1 ~ 10 10 <	Shimalite F Support you asked for	20/80		100ml	Halogenide
<b>L</b>								
	Lanoline (20 ~ 200)	Low	1 ~ 25		Support you asked for		100ml	
L-6	Lanoline(Denatured) (20 ~ 200)	Low	10 1 ~ 25	Chromosorb W Support you asked for	80/100	AW-DMCS	100ml	Cresol (Separation of o,m- and p)

## Packing Material

P/N	Stationary Phase (Operation Temparature )	Polarity	%	Support	Mesh Size	Treatment	Capacity	Application			
L-8	Lubrol MOA+KOH (30 ~ 150)	Low	10+1	Chromosorb W	60/80	AW-DMCS	100ml	Dimethylformamide			
	Liquid Paraffin (30 ~ 130)	Non	1 ~ 25	Support you asked for			100ml				
<b>M</b>											
	Mannitol (30 ~ 200)	High	1 ~ 25	Support you asked for			100ml	Nitrogen contained-compounds			
<b>N</b>											
	-Naphthylamine (20 ~ 70)	Mid	1 ~ 25	Support you asked for			100ml	Hydrocarbons			
N-20	Neopentylglycol Adipate(NGA) (50 ~ 225)	High	15	Shimalite W	60/80	AW-DMCS	100ml	Fatty acid esters			
N-21			15 1 ~ 25	Chromosorb W	60/80	AW-DMCS					
	Neopentylglycol Isophthalate(50 ~ 225)	High	1 ~ 25	Support you asked for			100ml				
	Neopentylglycol Sebacate (NGSe)(50 ~ 225)	High	1 ~ 25	Support you asked for			100ml	High boiling-temperature-compounds			
N-22	Neopentylglycol Succinate (NGS)(50 ~ 240)	High	5	Shimalite W	60/80	AW-DMCS	100ml	Fatty acid esters  Purfumes  Steroids  High boiling-temperature-compounds			
N-23			5	Chromosorb W	60/80	AW-DMCS					
N-17			2	Chromosorb W	60/80	AW-DMCS					
N-24			1.5	Shimalite W	60/80	AW-DMCS					
N-4			1	Chromosorb W	60/80	AW-DMCS					
N-25			1 ~ 25	Chromosorb W	80/100	AW-DMCS					
	Nonyl Phenol (20 ~ 120)		Low	1 ~ 25	Support you asked for		100ml	Phenols Alcohols			
<b>O</b>											
	n-Octadecane (0 ~ 90)	Non	1 ~ 25	Support you asked for			100ml	Hydrocarbons			
D-4	Octoil S (Diethyl-Sebacate) [Di(2-Ethylhexyl) Sebacate] (DOS) (0 ~ 140)	Mid	25	Shimalite	60/80	NAW	100ml	Esters  Alcohols			
D-62			20	Chromosorb W	60/80	AW					
			1 ~ 25	Support you asked for							
OV-1 (See Silicone OV-1)	OV-101 (See Silicone OV-101)										
OV-17(See Silicone OV-17)	OV-210 (See Silicone OV-210)										
OV-25(See Silicone OV-25)	OV-225 (See Silicone OV-225)										
O-42	'- Oxydipropionitrile (ODPN) (0 ~ 100)	High	25	Shimalite	60/80	NAW	100ml	hydrocarbons  Mercaptanes  Sulfur compounds (Monosulfides)			
O-55			25	Shimalite	80/100	NAW					
O-56			25	Chromosorb W	60/80	AW-DMCS-ST					
			1 ~ 25	Support you asked for							

**AW-DMCS-ST** means the special treatment for the analysis of sulfur compounds

### Inorganic Gases and Lower Hydrocarbons (C<sub>1</sub> ~ C<sub>2</sub>)

#### SHINCARBON ST

**SHINCARBON ST** is modified-carbon packings for analyzing the inorganic gases, and which is acceptance of the innovative packings for possessing the advantages of the molecular sieves and Porapak Q.

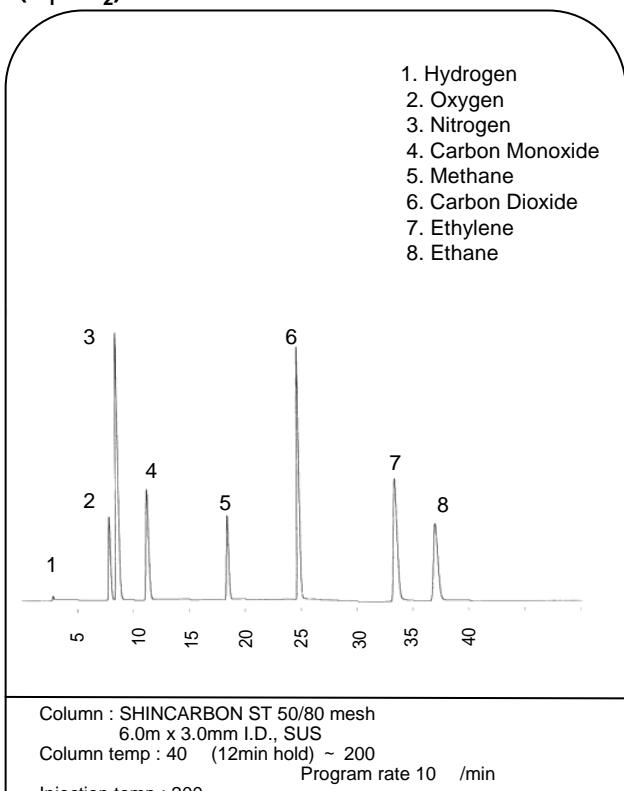

#### Characteristics

- 1) H<sub>2</sub>, O<sub>2</sub>, N<sub>2</sub>, CO, CH<sub>4</sub>, CO<sub>2</sub>, N<sub>2</sub>O, C<sub>2</sub>H<sub>2</sub>, C<sub>2</sub>H<sub>4</sub>, C<sub>2</sub>H<sub>6</sub> can be analyzing in 1 injection.
- 2) The column performance does not drop for moisture-samples. Injected water can be flush out by heating. (Water peak is not observed.)
- 3) Column length can be controlled in 2m, 4m, 6m, 8m, by connecting.
- 4) Carbonyl sulfide and sulfur dioxide can be analyzing with a glass column. (hydrogen sulfide is absorbed. see, sulfur compounds)
- 5) Vinyl chloride, chloromethane can be analyzing from Cl<sub>2</sub> and HCl gases. (see, Halogen compounds)

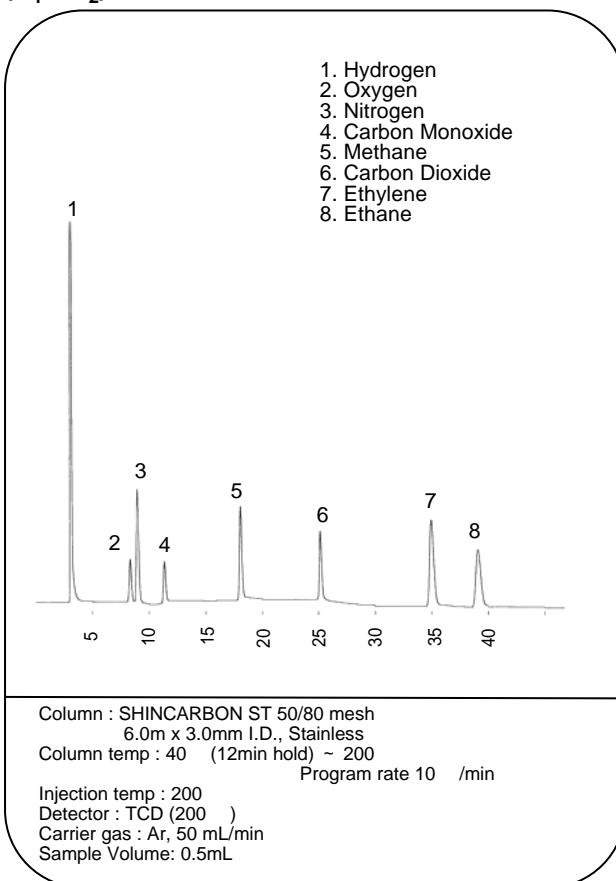

Column : SHINCARBON ST 50/80 mesh  
2.0m x 3.0mm I.D., SUS  
Column temp : 40 (3min hold) ~ 200  
Program rate 20 /min  
Injection temp : 200  
Detector : TCD (210 )  
Carrier gas : He, 50 mL/min  
Sample Volume: 0.5mL

### Inorganic Gases and Lower Hydrocarbons (C<sub>1</sub> ~ C<sub>2</sub>)

Column : SHINCARBON ST 50/80 mesh  
6.0m x 3.0mm I.D., SUS  
Column temp : 40 (12min hold) ~ 200  
Program rate 10 /min  
Injection temp : 200  
Detector : TCD (200 )  
Carrier gas : He, 50 mL/min  
Sample Volume: 0.5mL

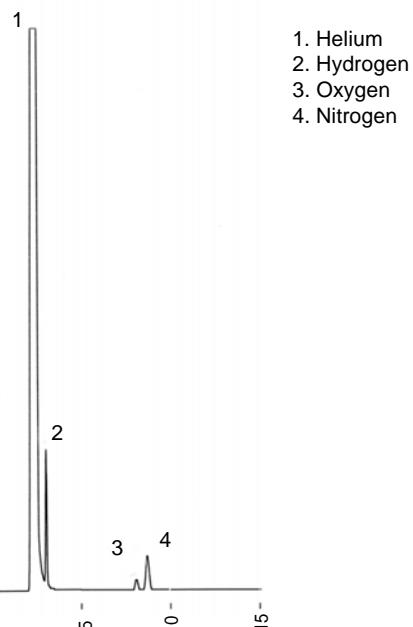

### Inorganic Gases and Lower Hydrocarbons (C<sub>1</sub> ~ C<sub>2</sub>)

Column : SHINCARBON ST 50/80 mesh  
6.0m x 3.0mm I.D., Stainless  
Column temp : 40 (12min hold) ~ 200  
Program rate 10 /min  
Injection temp : 200  
Detector : TCD (200 )  
Carrier gas : Ar, 50 mL/min  
Sample Volume: 0.5mL

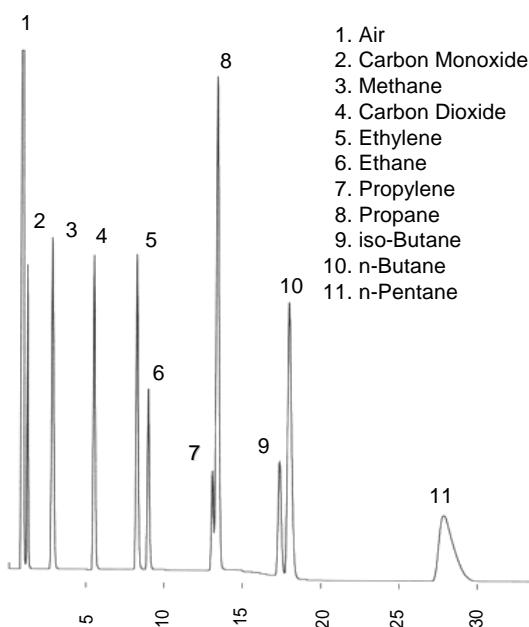

## Permanent Gases

### Hydrogen in Helium

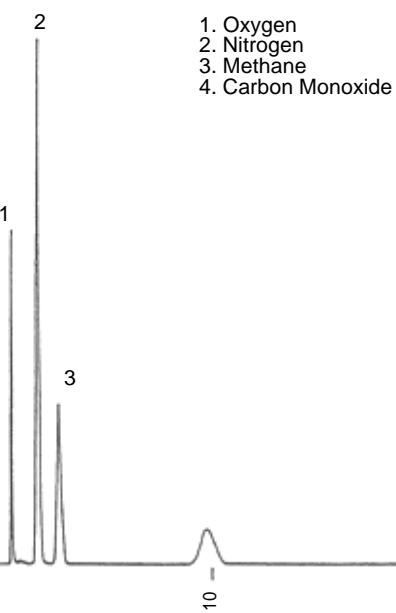

Column : SHINCARBON ST 50/80 mesh  
6.0m x 3.0mm I.D., SUS  
Column temp : 40  
Injection temp : 50  
Detector : TCD (50 )  
Carrier gas : Ar, 50 mL/min  
Sample Volume: 1.0mL

### Inorganic Gases and Lower Hydrocarbons ( $C_1 \sim C_2$ )

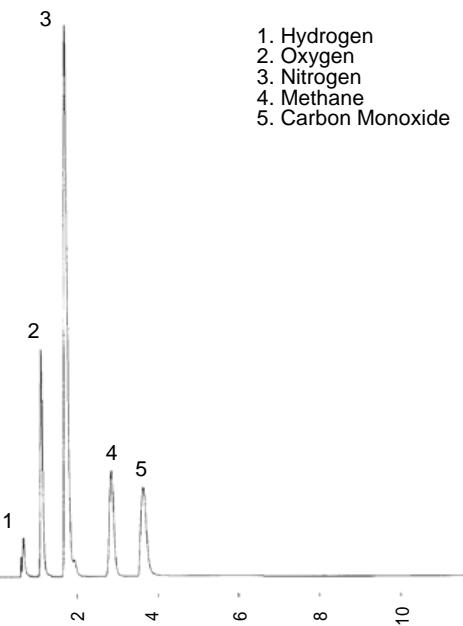

Column : SHINCARBON ST 50/80 mesh  
1.0m x 3.0mm I.D., SUS  
Column temp : 40 ~ 300 Program rate 20 /min  
Injection temp : 300  
Detector : TCD (300 )  
Carrier gas : He, 50 mL/min  
Sample Volume: 0.75mL

### Inorganic Gases (Oxygen, Nitrogen, Methane, Carbon Monoxide)

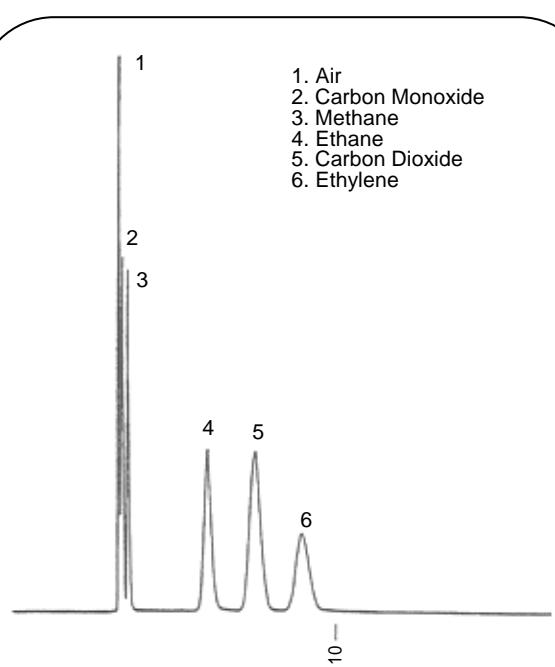

Column : Molecular Sieve 5A 60/80 mesh  
1.6m x 3.2mm I.D., Glass  
Column temp : 50  
Injection temp : 50  
Detector : TCD (50 )  
Carrier gas : He, 40 mL/min  
Sample Volume: 1.0mL

### Inorganic Gases (Oxygen, Nitrogen, Methane, Carbon Monoxide)

Column : Molecular Sieve 13X 60/80 mesh  
2.5m x 3.0mm I.D., SUS  
Column temp : 60  
Injection temp : 70  
Detector : TCD (70 )  
Carrier gas : He, 50 mL/min  
Sample Volume: 1.0mL

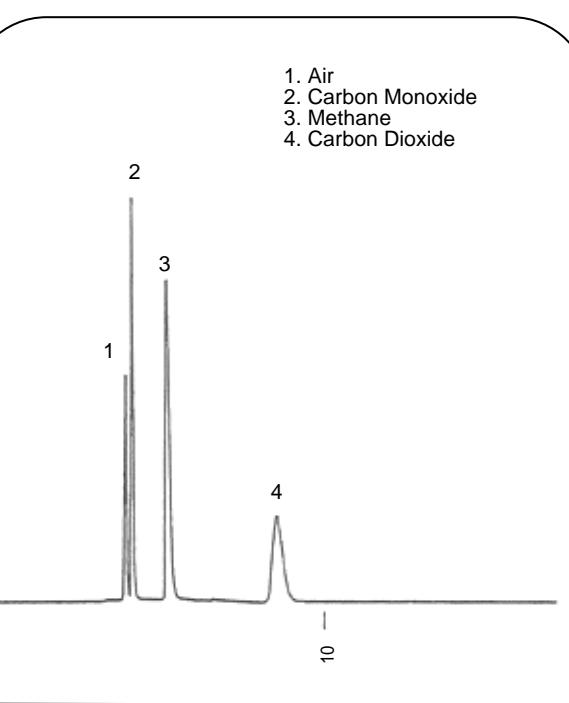

### Inorganic Gases and Lower Hydrocarbons

Column : Silica Gel 60/80 mesh  
1.6m x 3.2mm I.D., Glass  
Column temp : 50  
Injection temp : 50  
Detector : TCD (50 )  
Carrier gas : He, 60 mL/min  
Sample Volume: 1.0mL

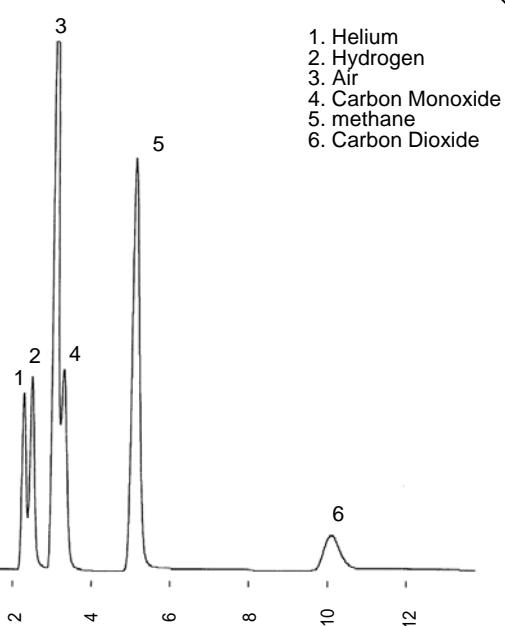

### Inorganic Gases and Methane

(Carbon Monoxide, Methane, Carbon Dioxide)

Column : Activated Charcoal 60/80 mesh  
1.6m x 3.2mm I.D., Glass  
Column temp : 50  
Injection temp : 50  
Detector : TCD (50 )  
Carrier gas : He, 50 mL/min  
Sample Volume: 1.0mL

### Inorganic Gases and Methane

Column : Porapak Q 80/100 mesh  
5.0m x 3.0mm I.D., SUS  
Column temp : 40  
Injection temp : 60  
Detector : TCD (60 )  
Carrier gas : Air, 20 mL/min  
Sample Volume: 1.0mL

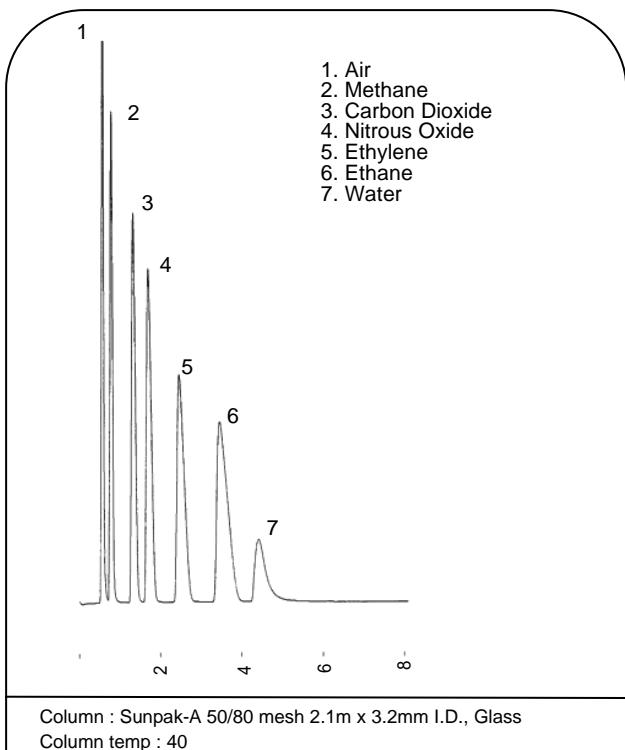

### Inorganic Gases and Lower Hydrocarbons

#### Sunpak-A

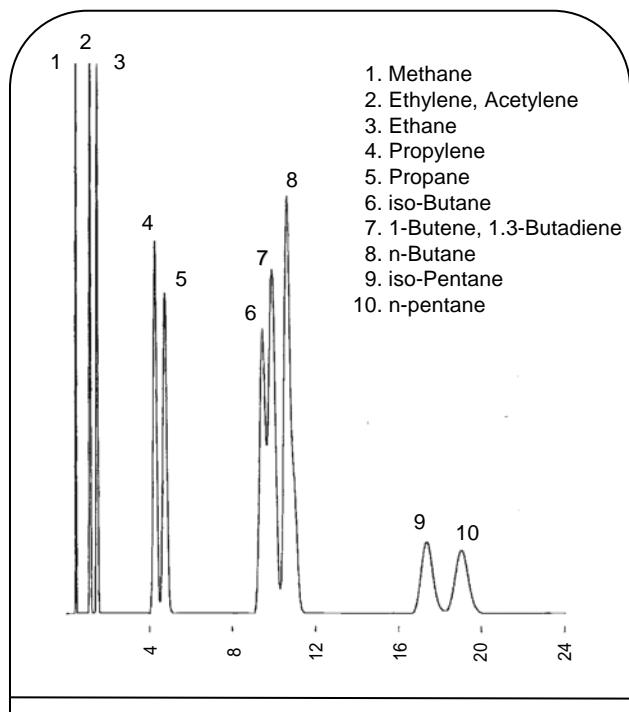

**Sunpak-A** is an original high effective high-cross-linking porous polymer packings. Higher resolution, efficiency and stability can be obtained than others.

#### Characteristics

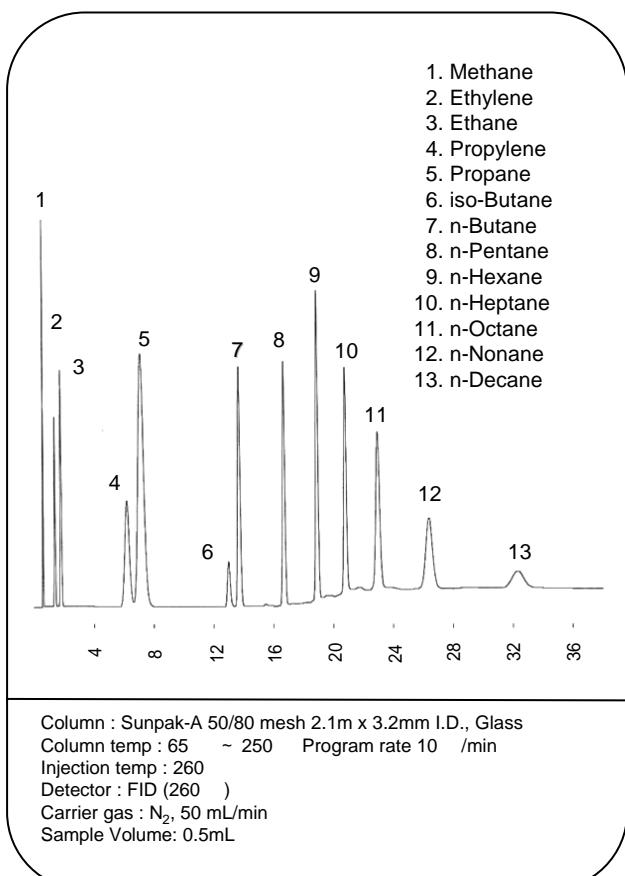

- 1) Porous copolymer beads of ethylvinylbenzene and divinylbenzene. Supporting the USP code [3]
- 2) Low hydrocarbons, lower alcohols, CO<sub>2</sub>(inorganic gases) can be analyzing from aqueous sample.
- 3) Short retention time of water. Excellent for the micro analysis of water in organic solvents.
- 4) High lot-to-lot uniformity.
- 5) Samples, difficult for diatomite supports by degradation reaction, can be analyzed by coating the liquid phase. (see, alcohols and amines)

#### Lower Hydrocarbons

#### Lower Hydrocarbons

## Lower Hydrocarbons

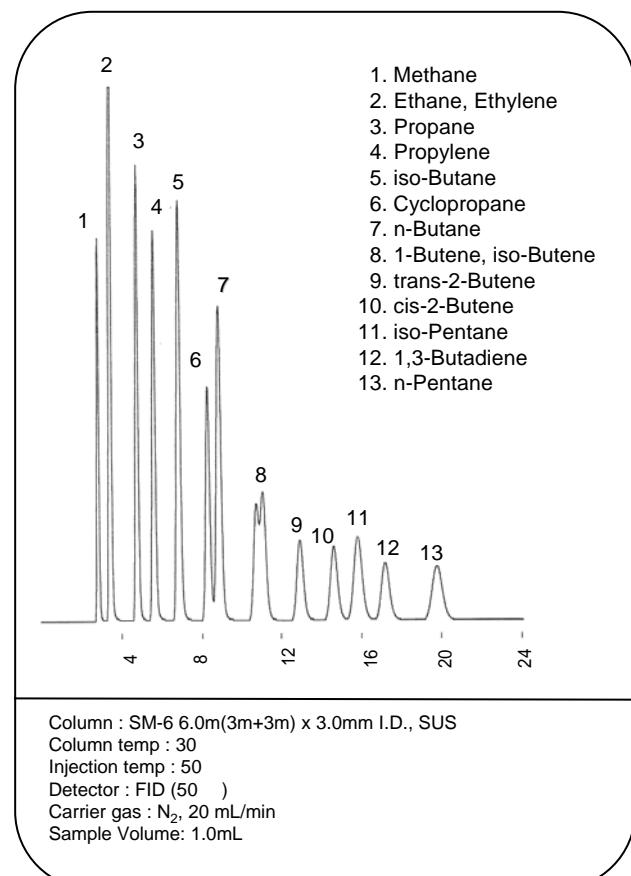

### Lower Hydrocarbons

#### SM-6

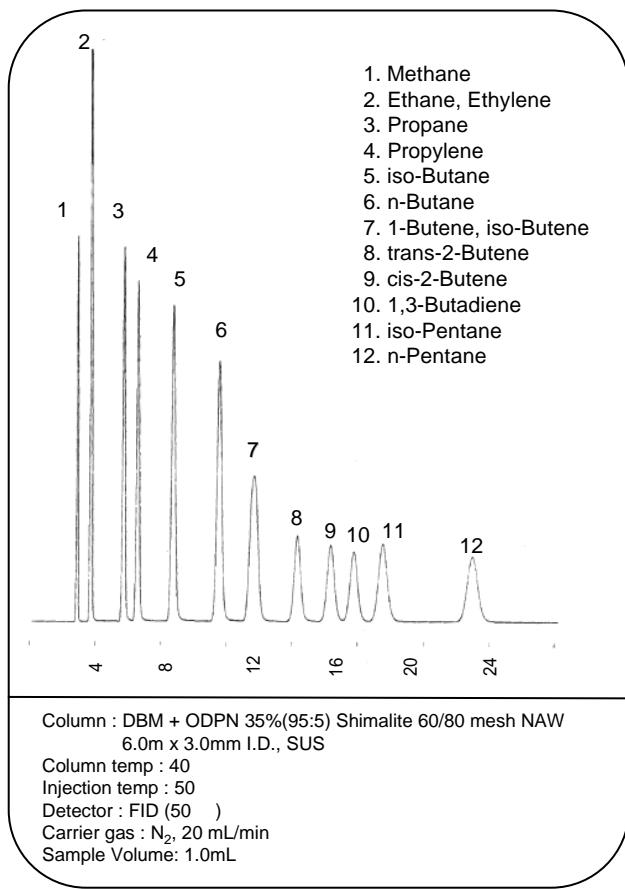

**SM-6** is the analytical column for LPG (liquefied petroleum gas). High performance is obtained for the separation of low hydrocarbon isomers.

#### Characteristics Characteristics

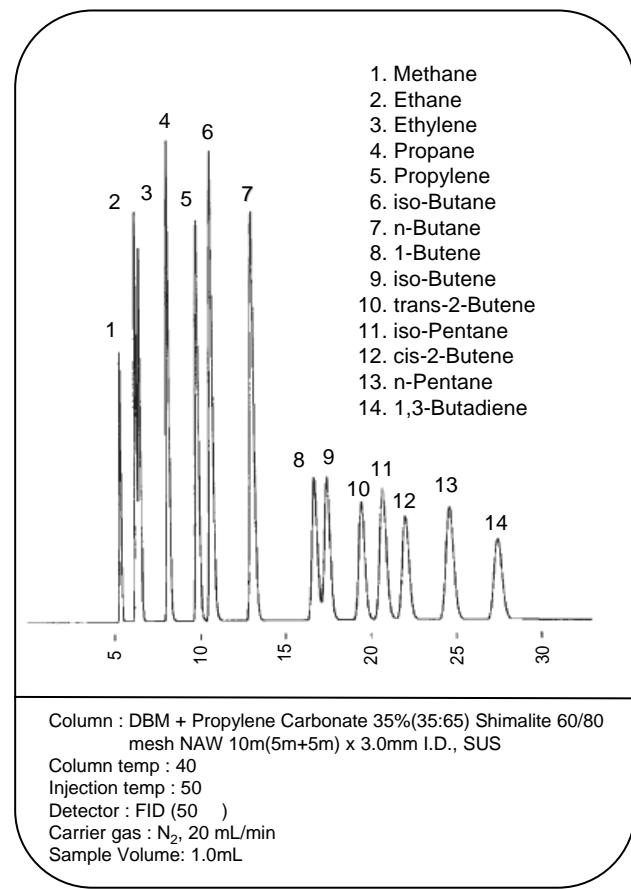

- 1) **SM-6 is composed of each 3m of SM-PACK (S) and SM-PACK (M).**
- 2) **Connecting the SM-PACK (S) side to injector.**  
The label is on the column inlet.

### Lower Hydrocarbons

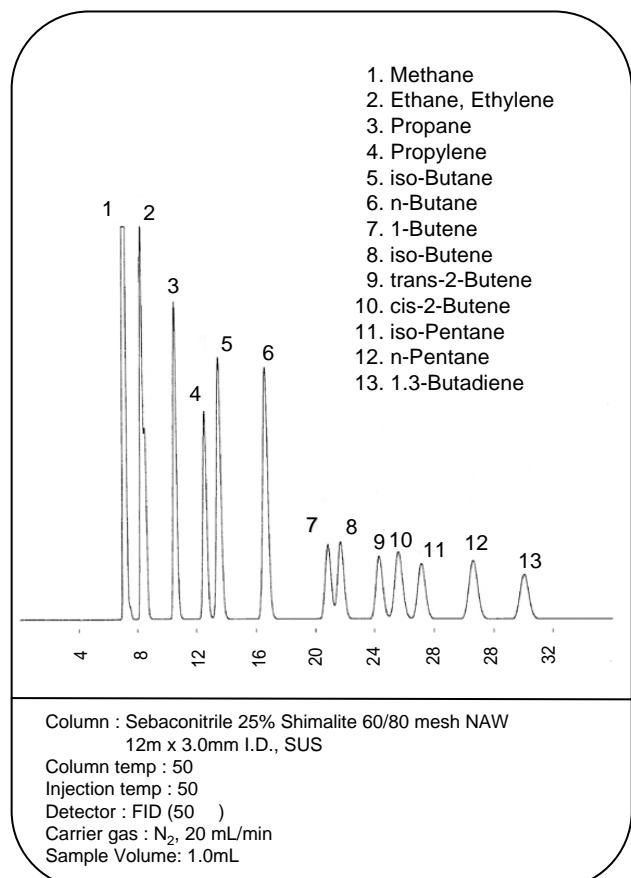

### Lower Hydrocarbons

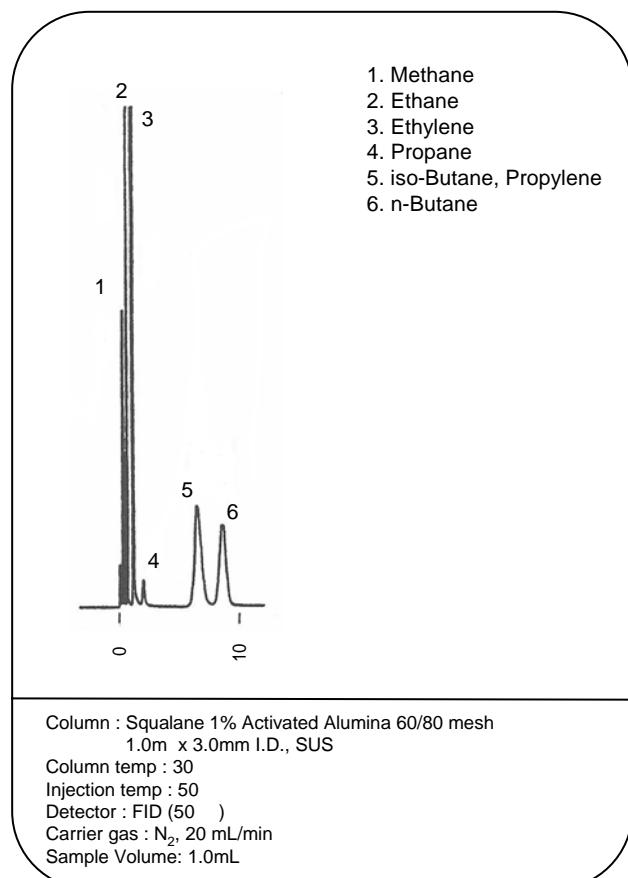

## Lower Hydrocarbons

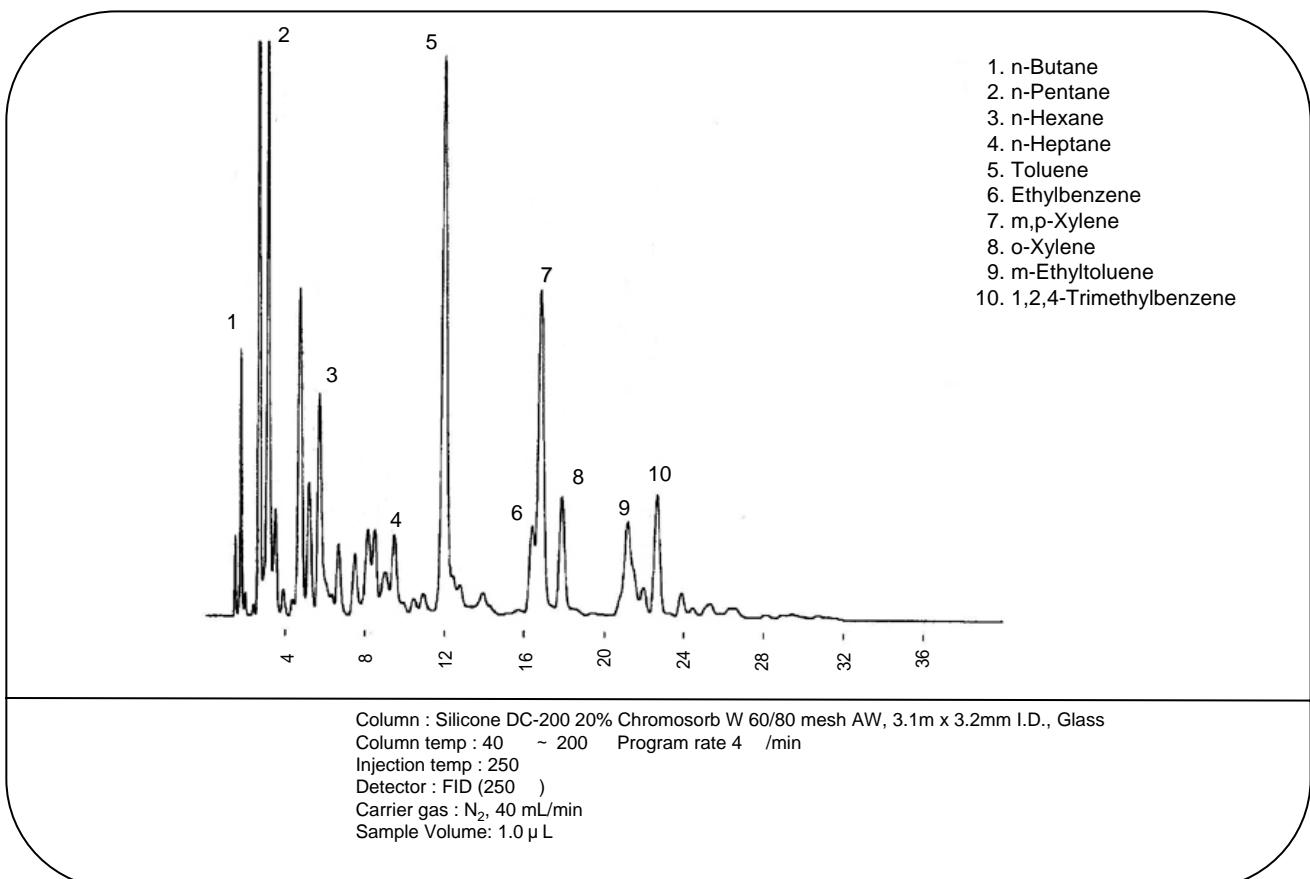

### Lower Hydrocarbons

### Lower Hydrocarbons

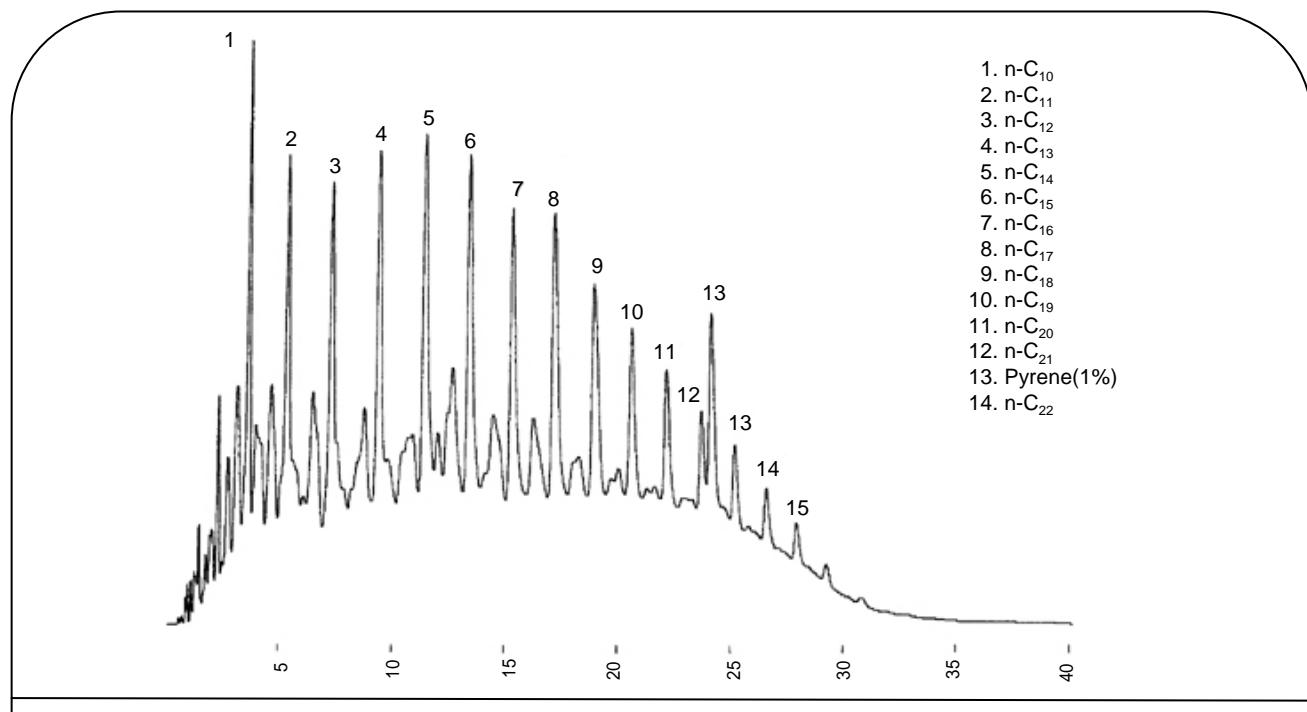

## Gasoline

## Hydrocarbons

### Mixture of Kerosene and Light Oil

Column : Silicone SE-52 5% Shimalite W 60/80 mesh AW, 2.5m x 3.0mm I.D., SUS

Column temp : 80 ~ 250 Program rate 6 /min

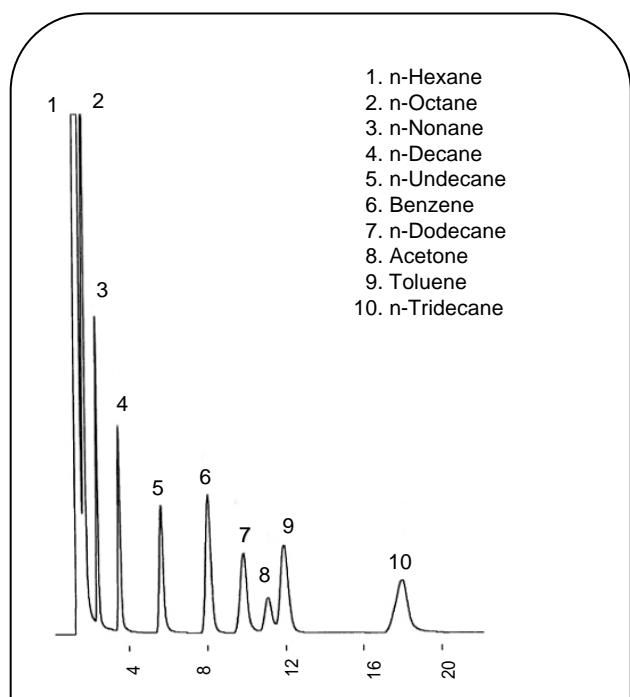

Injection temp : 270

Detector : FID (270 )

Carrier gas : N<sub>2</sub>, 50 mL/min

Sample Volume: 1.0 μL

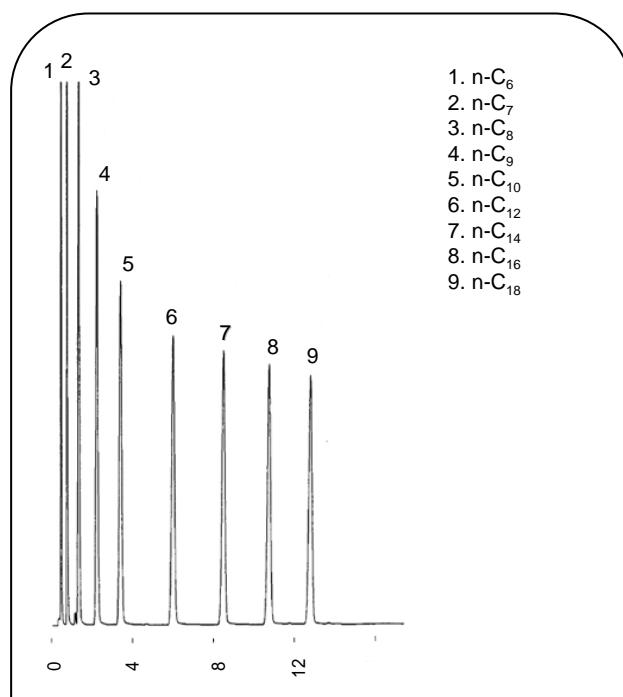

### Hydrocarbons and Acetone

Column : N,N'-BCEF 30% Chromosorb P 60/80 mesh NAW  
3.0m x 3.0mm I.D., SUS

Column temp : 80  
Injection temp : 150  
Detector : FID (150 )  
Carrier gas : N<sub>2</sub>, 20 mL/min  
Sample Volume: 1.0 μL

### Hydrocarbons

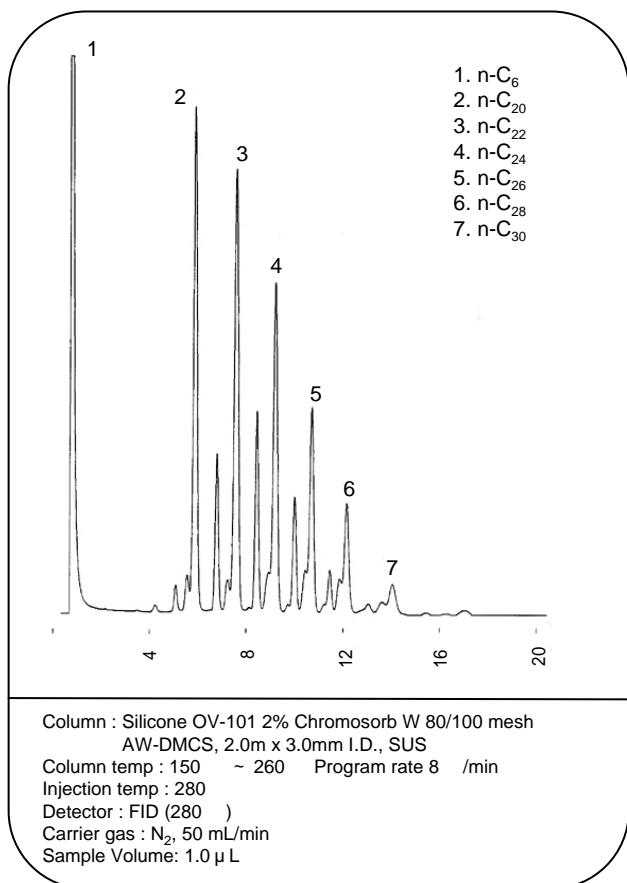

Column : Silicone OV-1 5% Chromosorb W 60/80 mesh  
AW-DMCS 1.0m x 3.0mm I.D., SUS

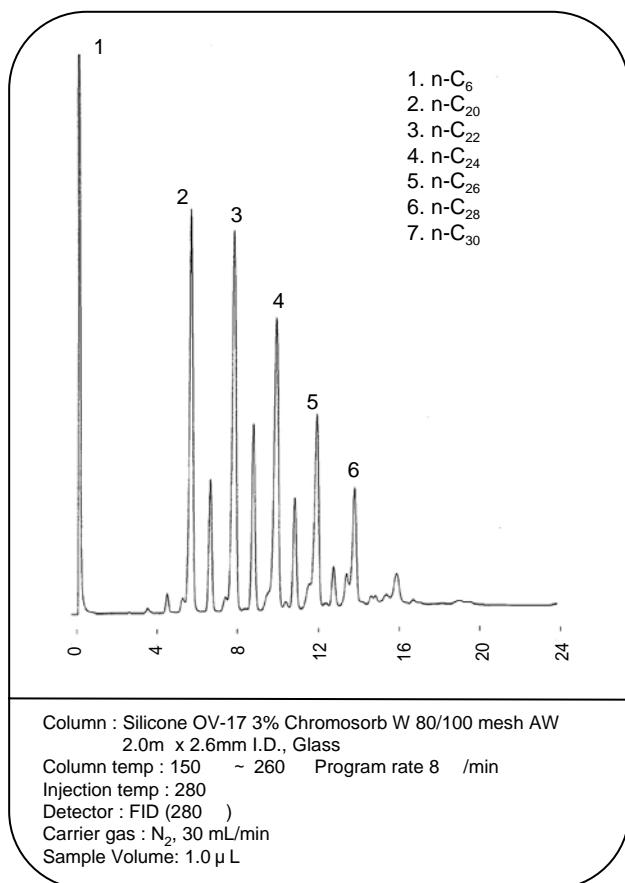

Column temp : 50 ~ 220  
Program rate 10 /min  
Injection temp : 250  
Detector : FID (250 )  
Carrier gas : N<sub>2</sub>, 40 mL/min  
Sample Volume: 1.0 μL

## Hydrocarbons

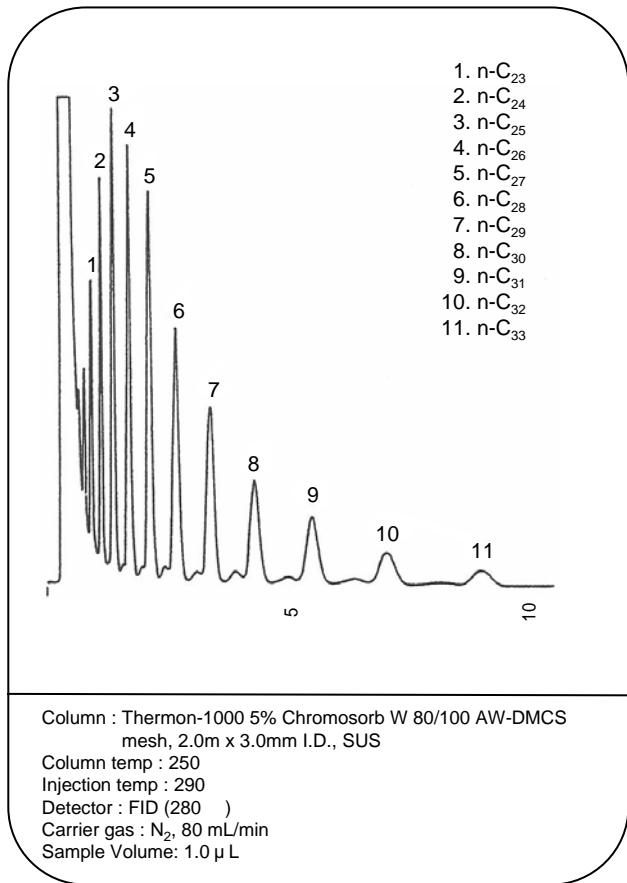

**Paraffin Wax m.p. 40 ~ 42**

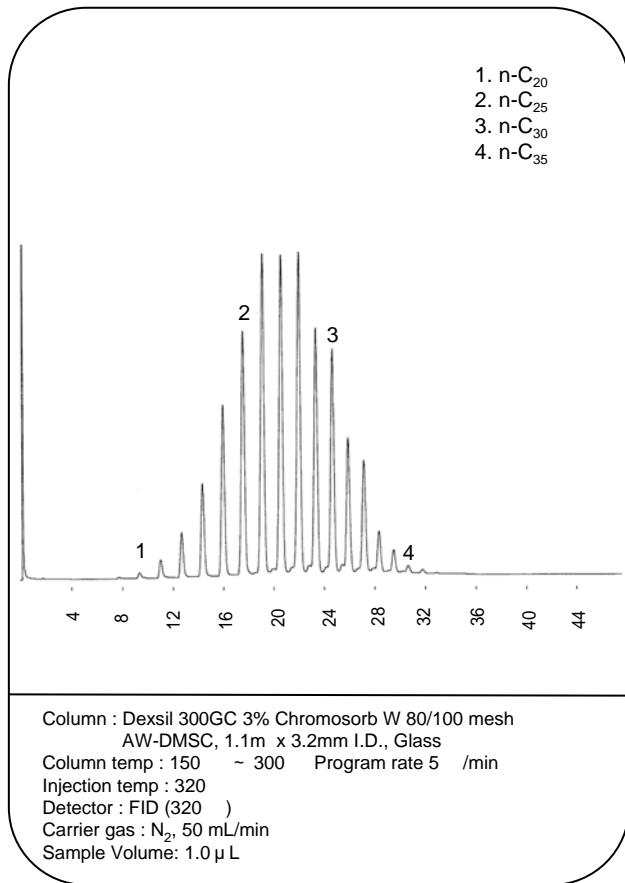

**Paraffin Wax m.p. 40 ~ 42**

**Paraffin Wax m.p. 48 ~ 50**

**Paraffin Wax m.p. 60 ~ 62**

## Aromatic Hydrocarbons

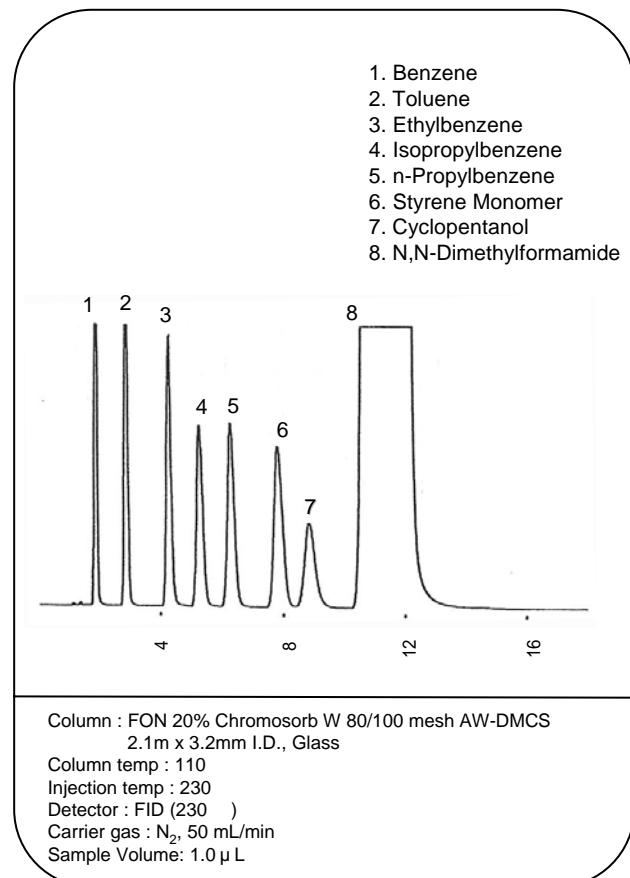

### Styrenemonomer in Resin

#### FON

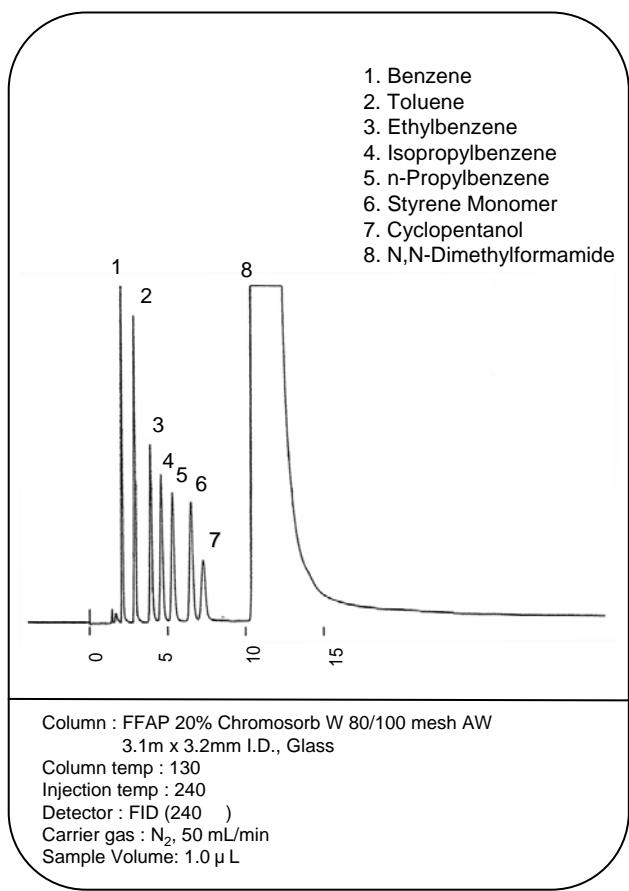

The chemical structure of FON is similar to that of FFAP.

#### Characteristics

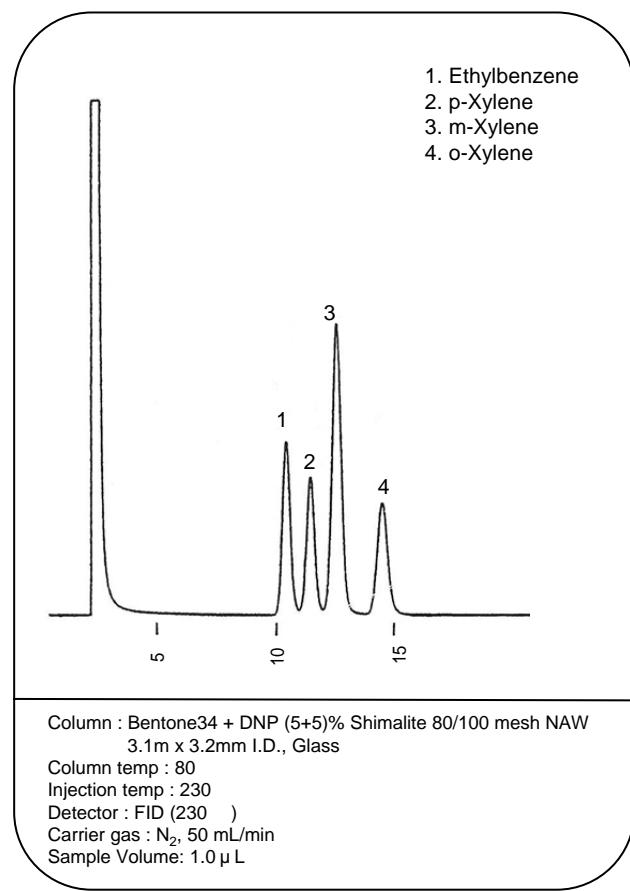

- 1) Because of the acidic stationary phase, the excellent analysis of acidic compounds can be performed.  
(see, lower fatty acids)
- 2) It is also available for the analysis of aromatic hydrocarbons.
- 3) The maximum operation temperature is 250 .

### Styrenemonomer in Packing Materials

### Xylene Isomers

### SBS Series (SBS-100, 120, 200, 300)

When small amount sample are analysed in head space method, about 5 mL of air including sample are injected. It is well known that packing material loaded polyethylene glycols is cleavaged by oxygen in the air and the separation could not be performed. **SBS** series are designed not to affect by oxygen in air.

**SBS** series are composed of SBS-100, SBS120, SBS-200 and SBS-300.

#### SBS-100 [SBS-100 10% Shimalite TPA 60/80 (30 ~ 150 °C)]

##### Characteristics

- 1) SBS-100 has middle polarity and has an oxidation-resistance.
- 2) Polar compounds such as alcohols in air can not be absorbed on the packing material, so quantitative analysis of small amount sample is possible.
- 3) As the support of SBS-100 is TPA, the column is not suffer from influence of the sample containing water in the air.

#### SBS-120 [SBS-120 12% SHINCARBON-A 80/100 (30 ~ 150 °C)]

##### Characteristics

- 1) The stationary phase of SBS-120 is the same of SBS-100.
- 2) SHINCARBON-A of graphite carbon is used for support. Therefore, the separation of alcohols, esters, ketones, hydrocarbons and cellosorbs is excellent. And minor quantitative analysis is possible. SBS-120 is possible minor quantitative analysis. Even if moisture is included in air, SBS-120 is unaffected.

#### SBS-200 [SBS-200 20% Shimalite W 100/120 AW-DMCS (30 ~ 250 °C)]

##### Characteristics

- 1) SBS-200 has middle polarity and oxidation resistance.
- 2) SBS-200 can analyze compounds of wide range from low boiling point to high boiling point
- 3) The number of theoretical plates is high, and the separation is excellent. Because support of diatomaceous earth is used.

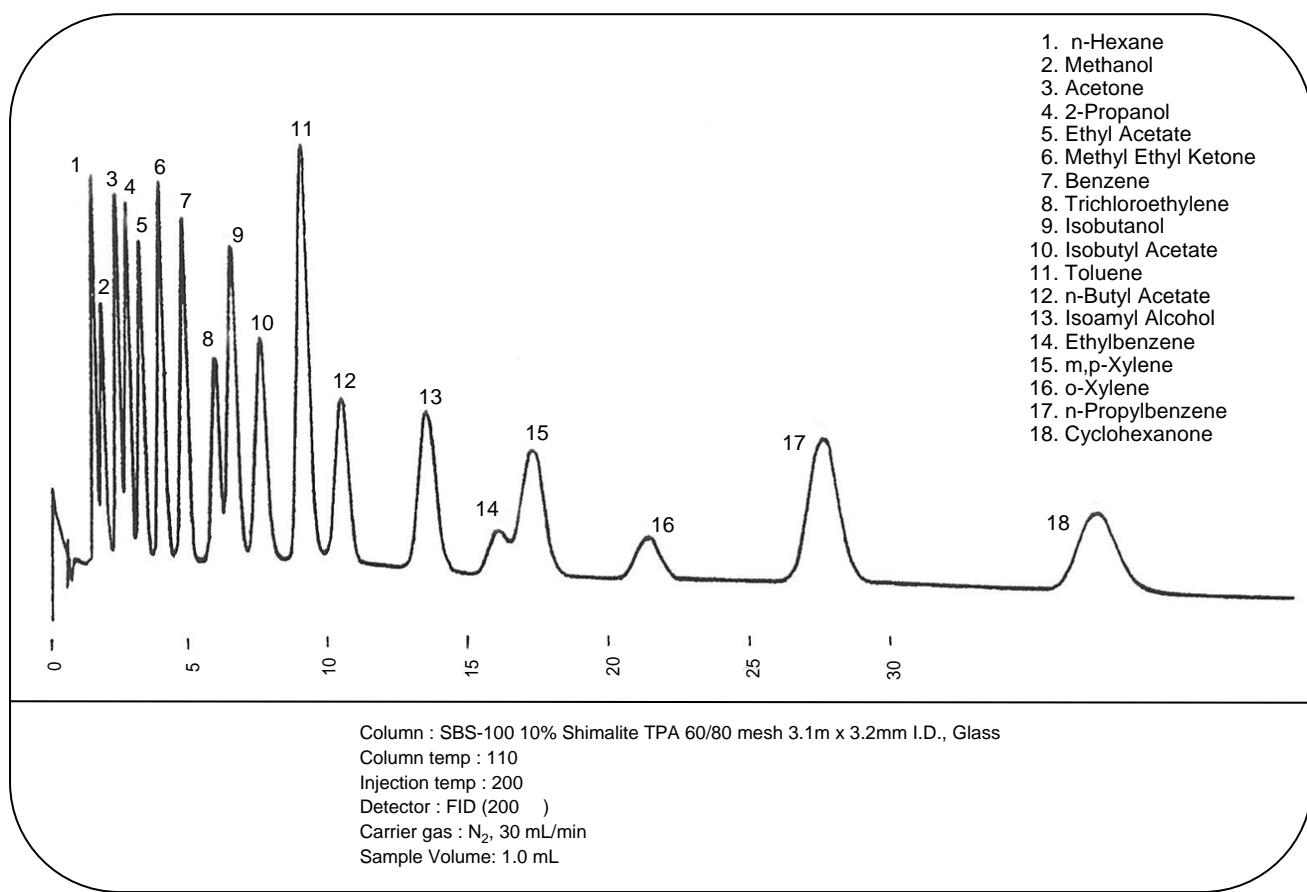

#### SBS-300 [SBS-300 20% Shimalite W 80/100 AW-DMCS (30 ~ 280 °C)]

##### Characteristics

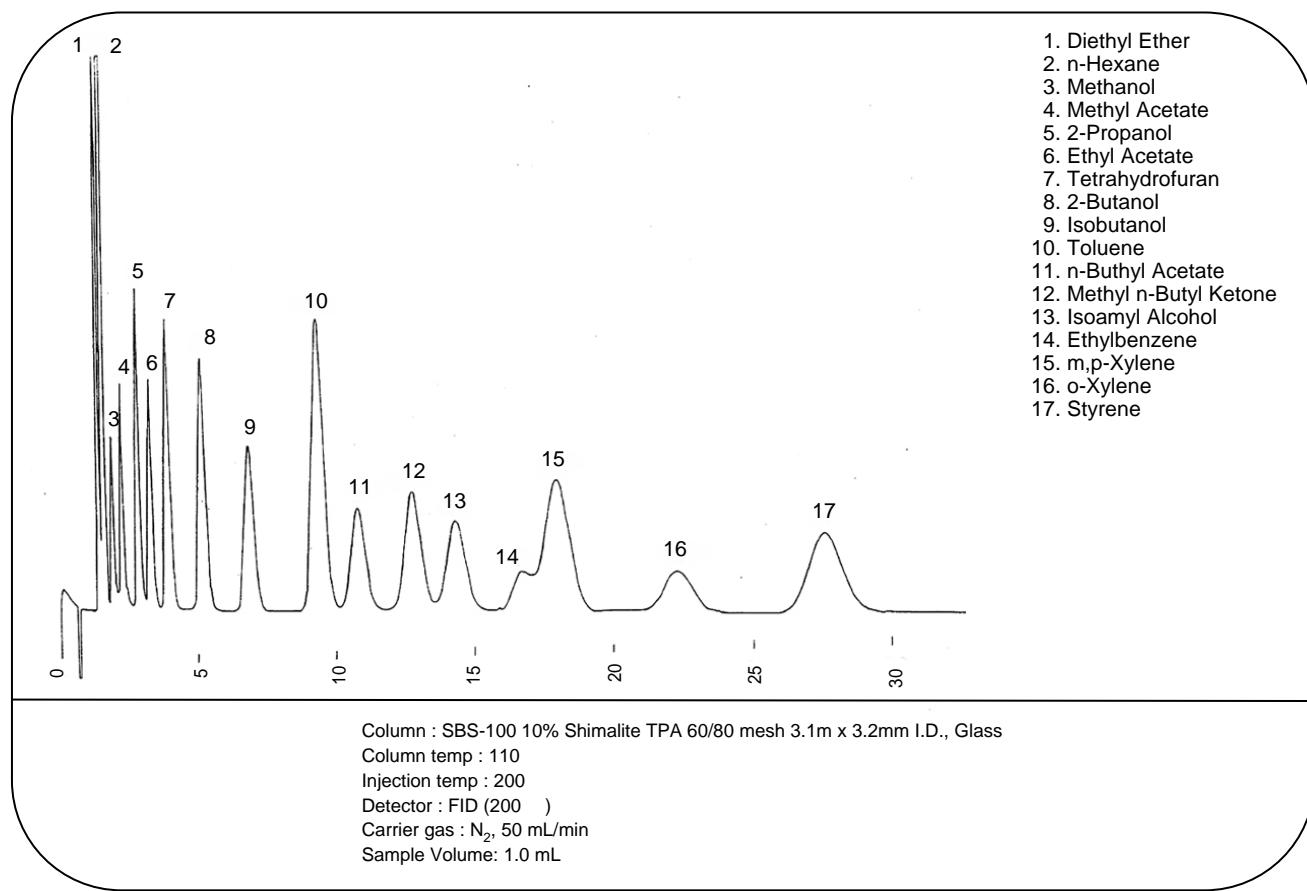

- 1) SBS-300 is a packing material having silicone structure.
- 2) SBS-300 has non polarity and oxidation resistance.
- 3) Minor chloric compounds can be separated.
- 4) Heat resistance temperature is high, and bleeding of stationary phase doesn't occur. As a result, the bleeding of stationary phase doesn't occur and ECD analysis is also possible.
- 5) The number of theoretical plates is high, and the separation is excellent. Because support of diatomaceous earth is used.

## Organic Solvents

### Organic Solvents in Air

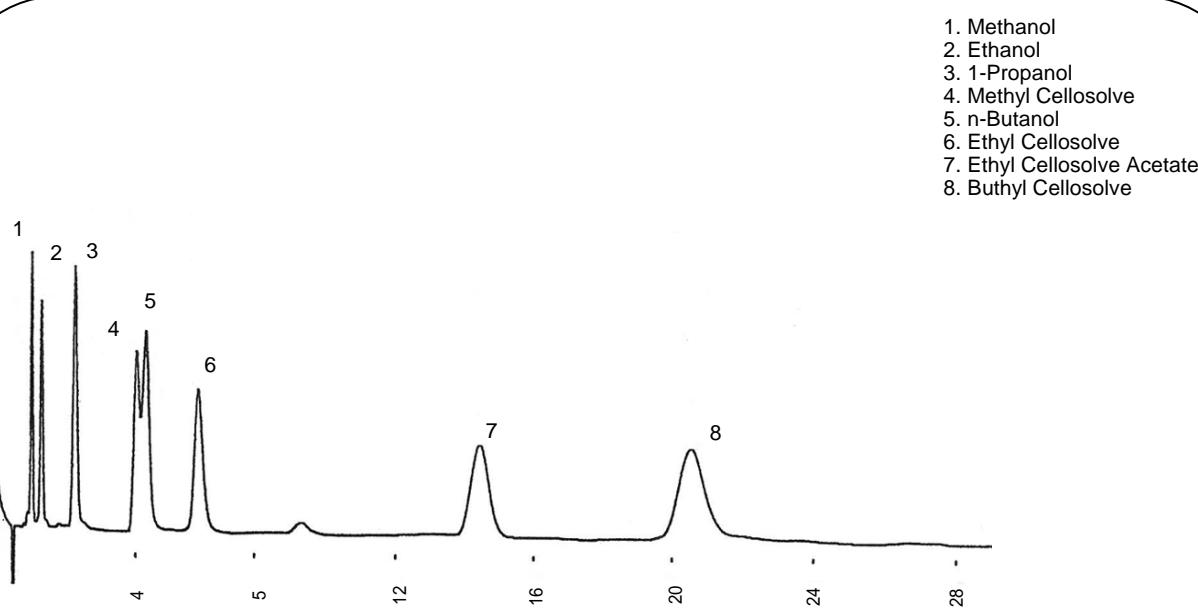

### Organic Solvents in Air

## Organic Solvents

### Organic Solvents in Air

Column : SBS-120 12% SHINCARBON A 80/100 mesh 3.1m x 3.2mm I.D., Glass

Column temp : 90

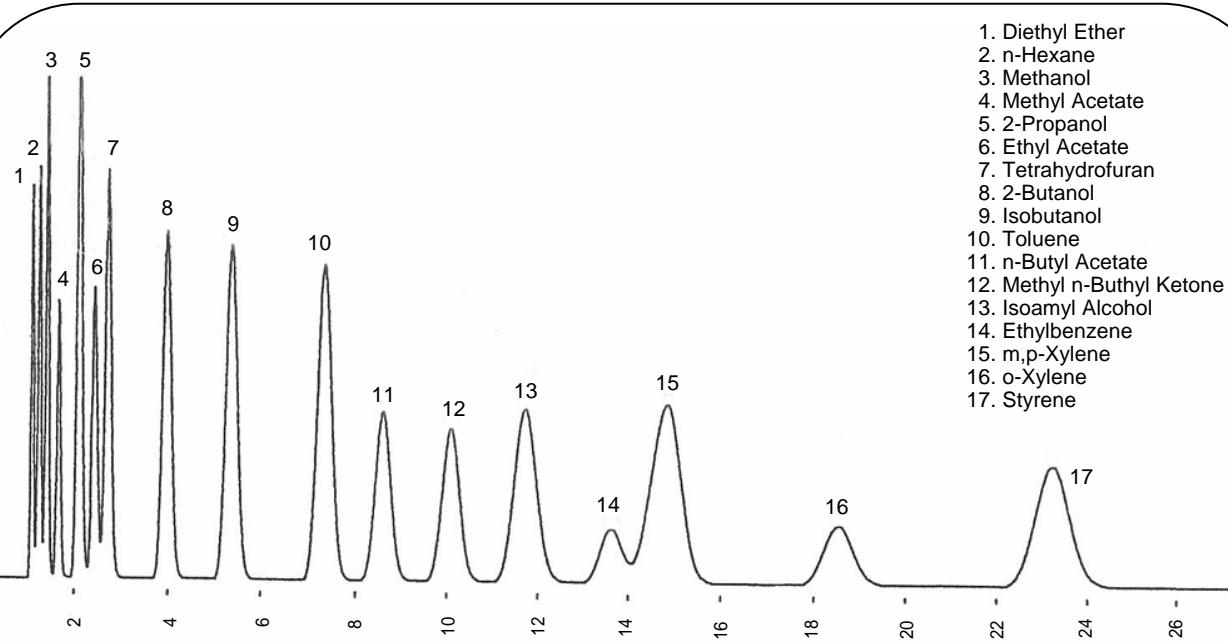

Injection temp : 220

Detector : FID (200 )

Carrier gas : N<sub>2</sub>, 50 mL/min

Sample Volume: 1.0 mL

### Organic Solvents in Air

Column : SBS-120 12% SHINCARBON A 80/100 mesh 3.1m x 3.2mm I.D., Glass

Column temp : 100

Injection temp : 200

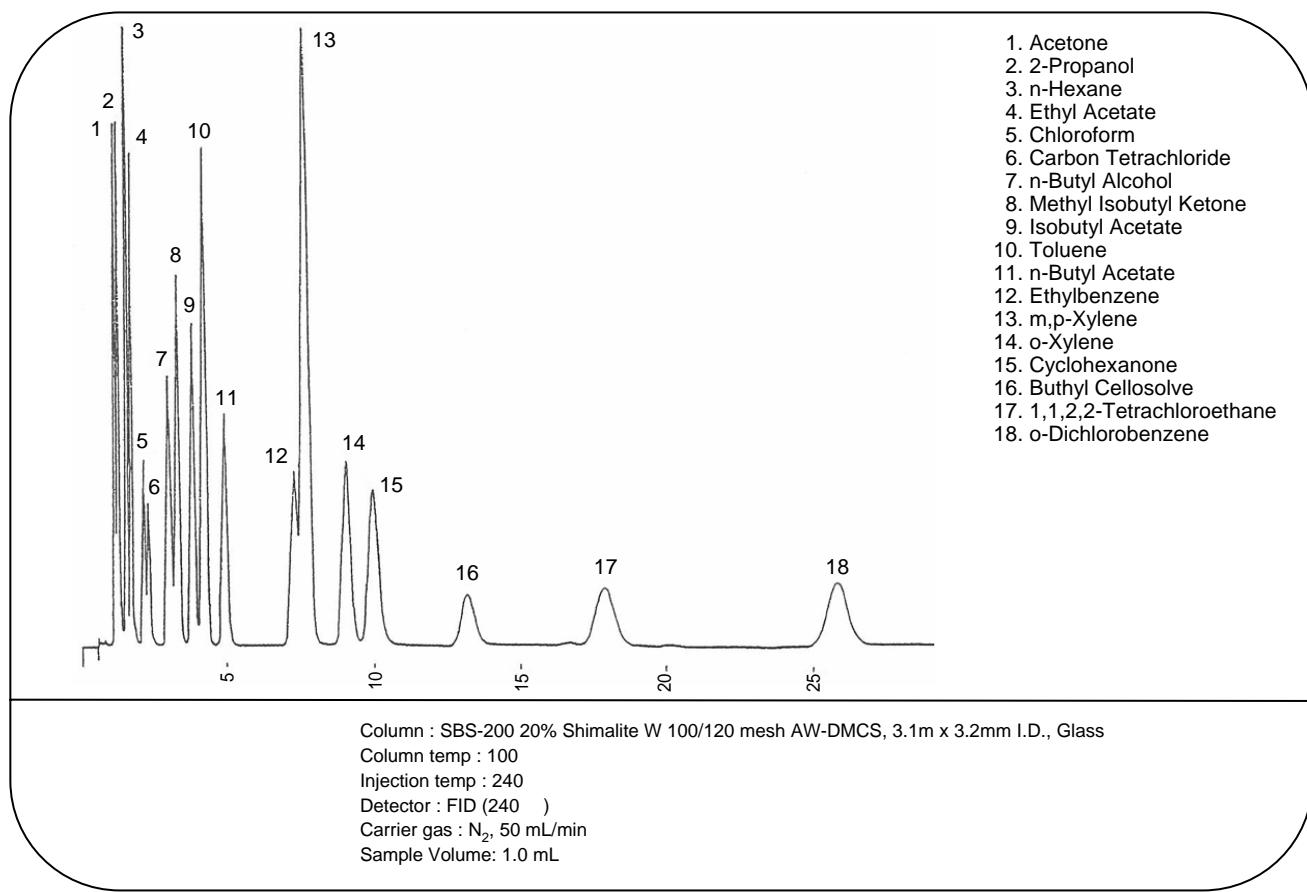

Detector : FID (200 )

Carrier gas : N<sub>2</sub>, 30 mL/min

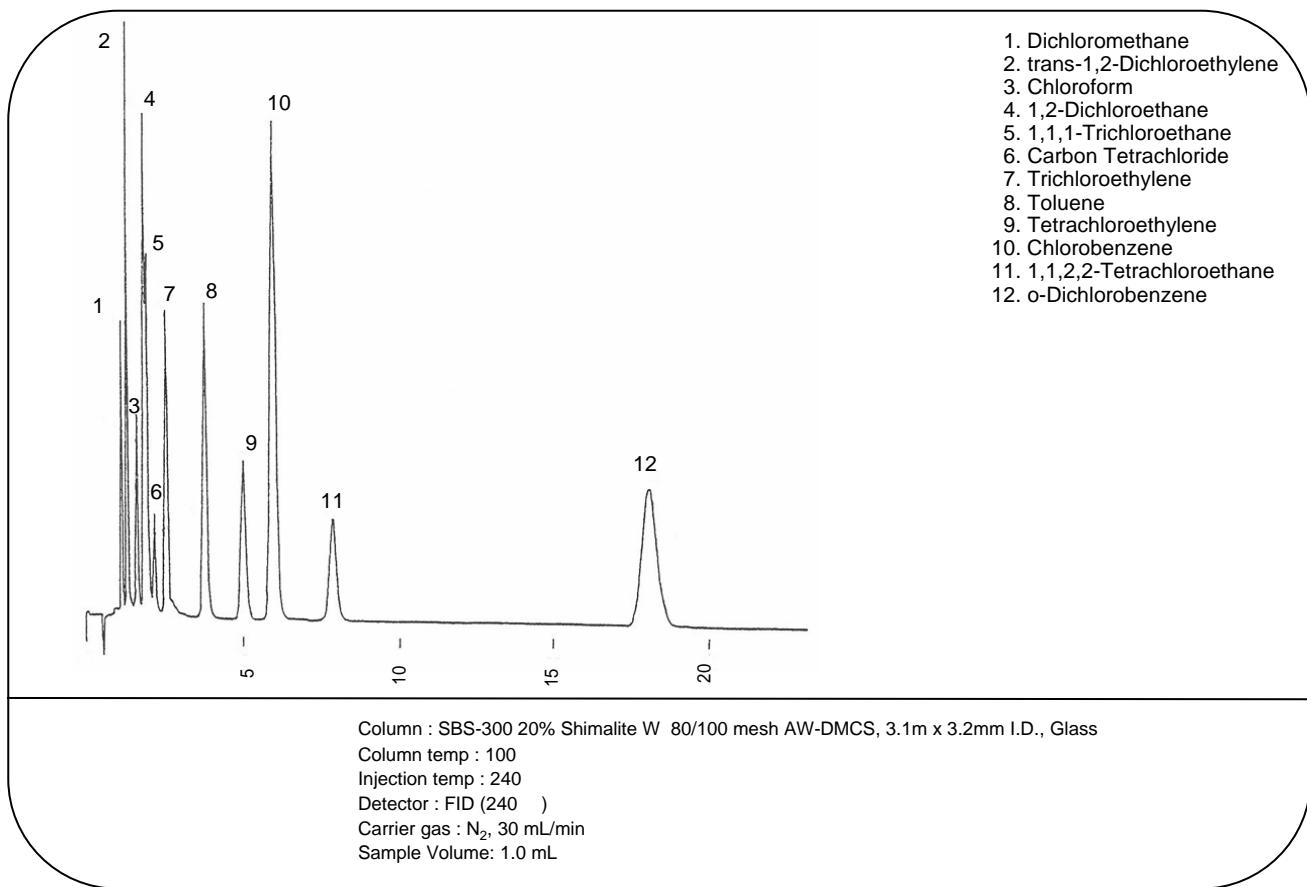

Sample Volume: 1.0 mL

## Organic Solvents

### Organic Solvents in Air

### Organic Solvents in Air

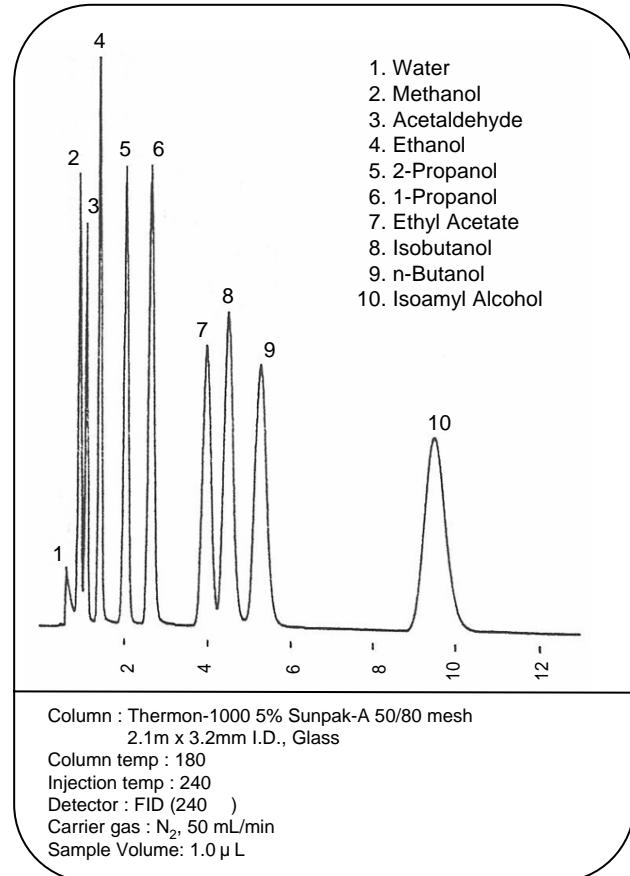

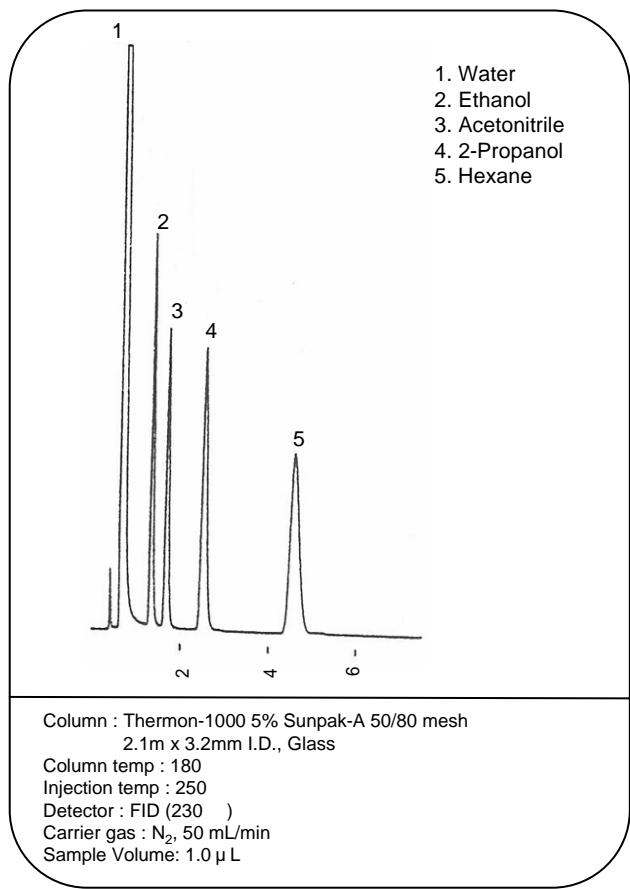

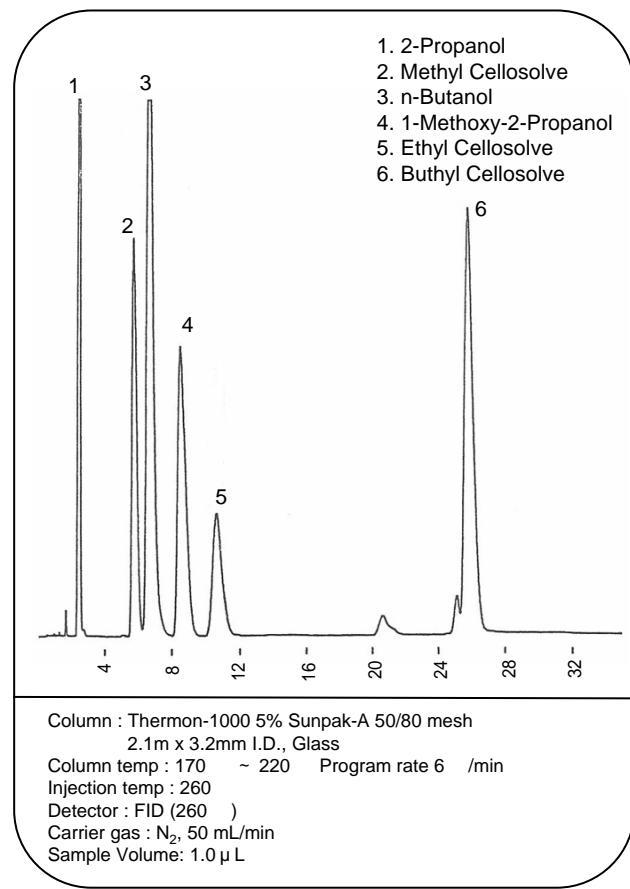

**Alcohols in Water****Thermon-1000 5% Sunpak-A**

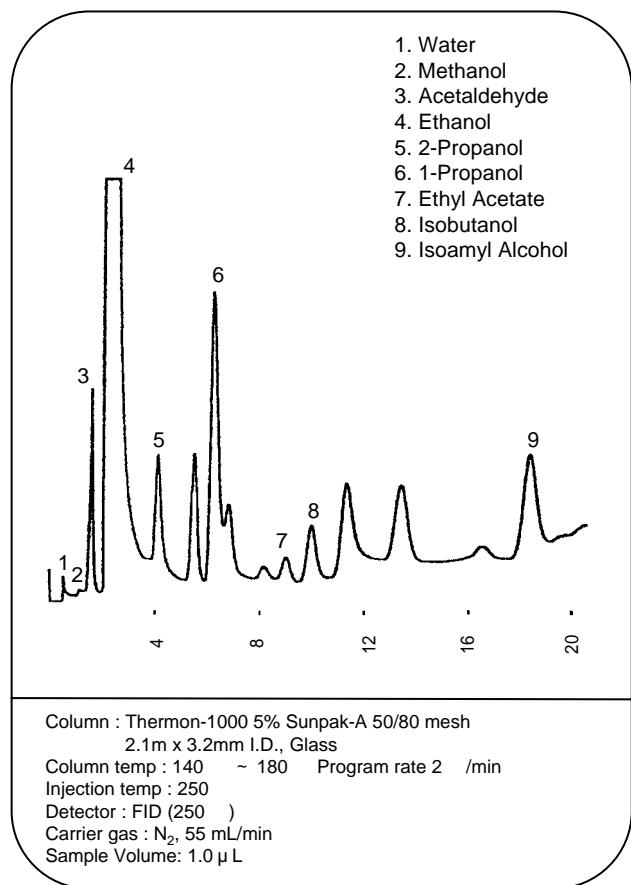

Thermon-1000 is packing material which Sunpak-A is an original high effective high-cross-linking porous polymer packings. Thermon-1000 can be analyzed at compounds that can not be separated on the diatomaceous earth support.

**Characteristics**

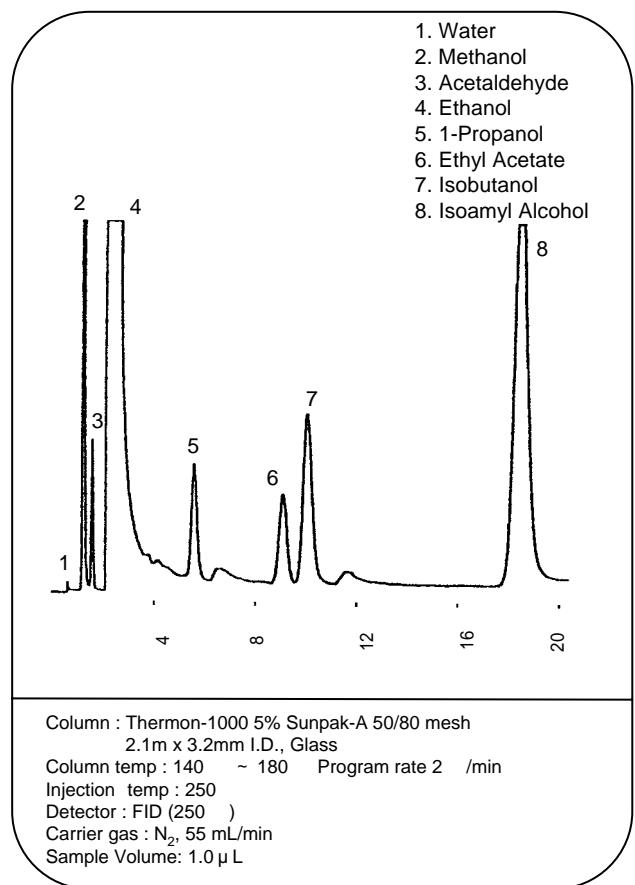

- 1) As the porous polymer beads are used as a support, hydrocarbons ( $C_1 - C_4$ ), lower alcohols, aldehyde and ketone containing water can be analyzed.
- 2) Analysis objective compounds are eluted in order of molecular weight. As a result, the quantitative analysis is performed easily
- 3) By the partition equilibrium on Sunpack A, compounds impossible by diatomaceous earth support can be separated by Sunpak-A.

**Organic Solvents in Water****Alcohols and Cellosolvents**

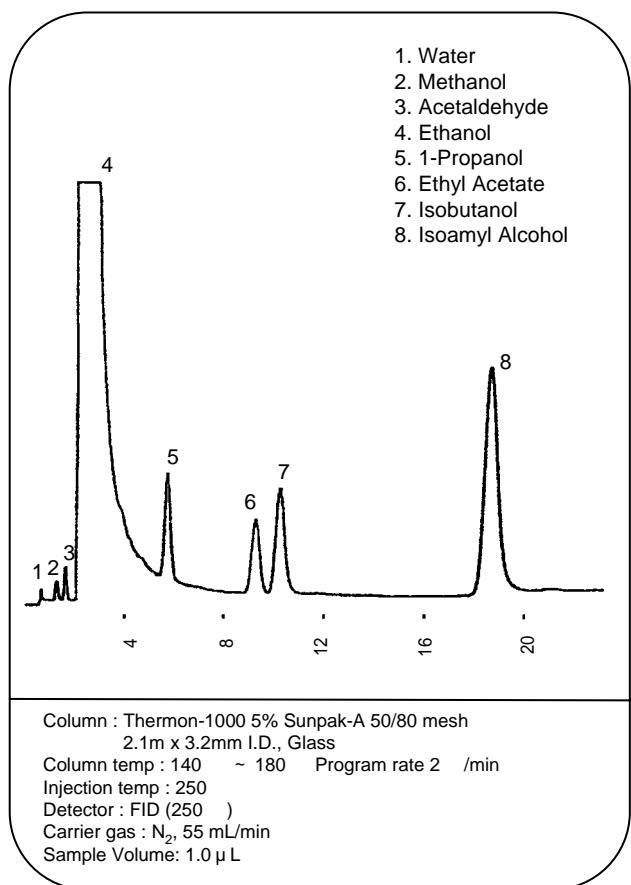

**Sake**

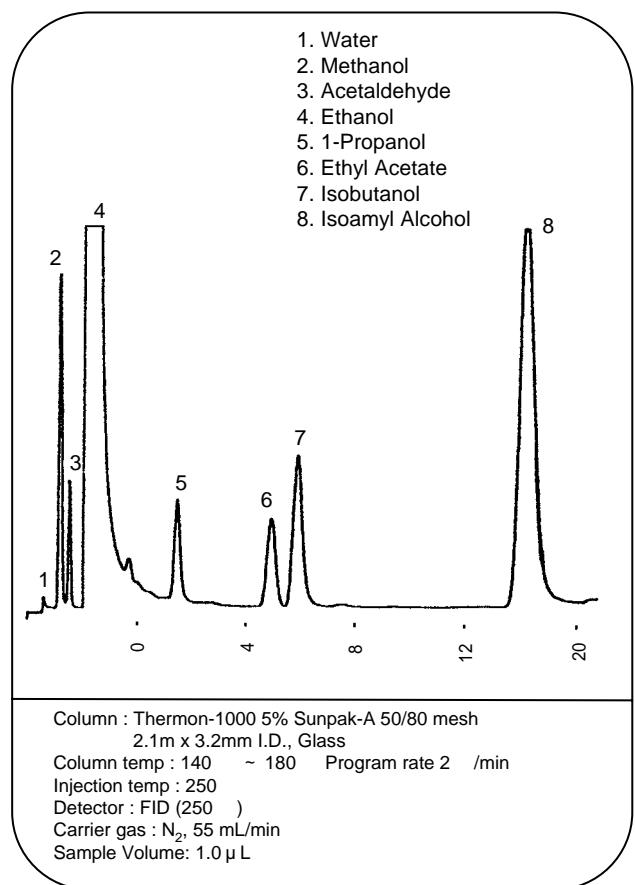

**Brandy**

**Whiskey**

**Wine**

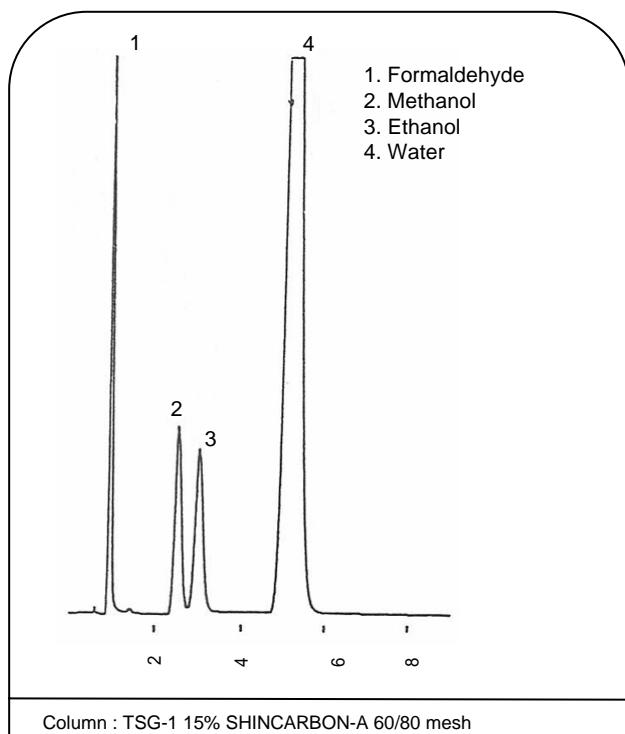

**Formaldehyde in Water****TSG-1**

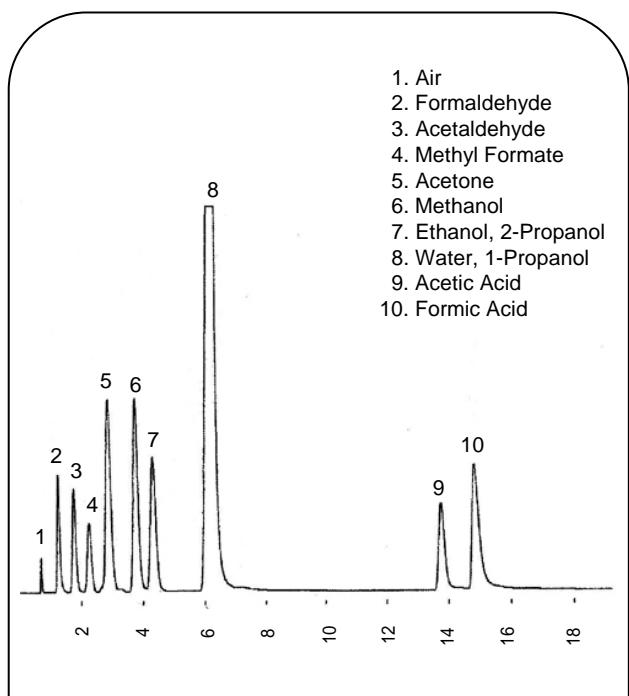

**TSG-1** is the original packing material developed for analyzing of formaline.

**Characteristics**

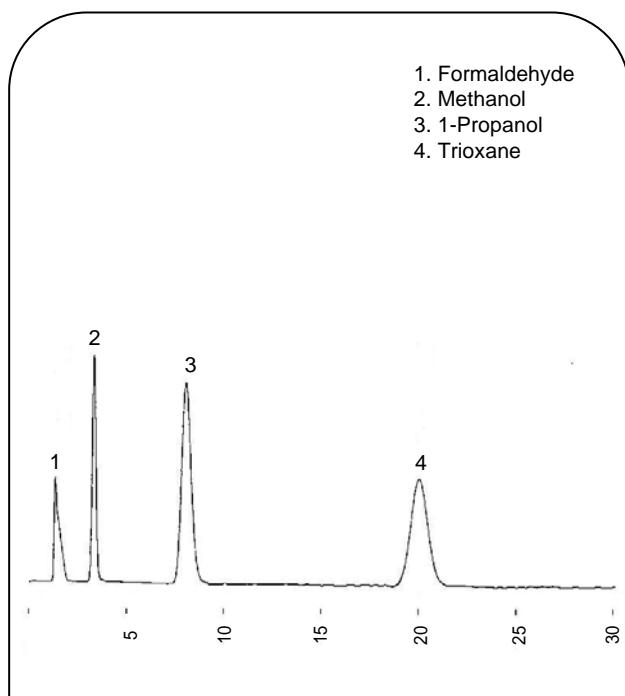

- 1) As SHINCARBON A is used as the support, activity of adsorption is not recognized. And quantitative analysis can be extremely performed. The detection limit of aldehyde is 300 - 500 ppm.
- 2) Lower alcohols, ketone and aldehyde in water can be separated by TSG-1.

Column : TSG-1 15% SHINCARBON-A 60/80 mesh  
3.1m x 3.2mm I.D., Glass  
Column temp : 90  
Injection temp : 250  
Detector : TCD (250 )  
Carrier gas : He, 40 mL/min  
Sample Volume: 1.0  $\mu$ L

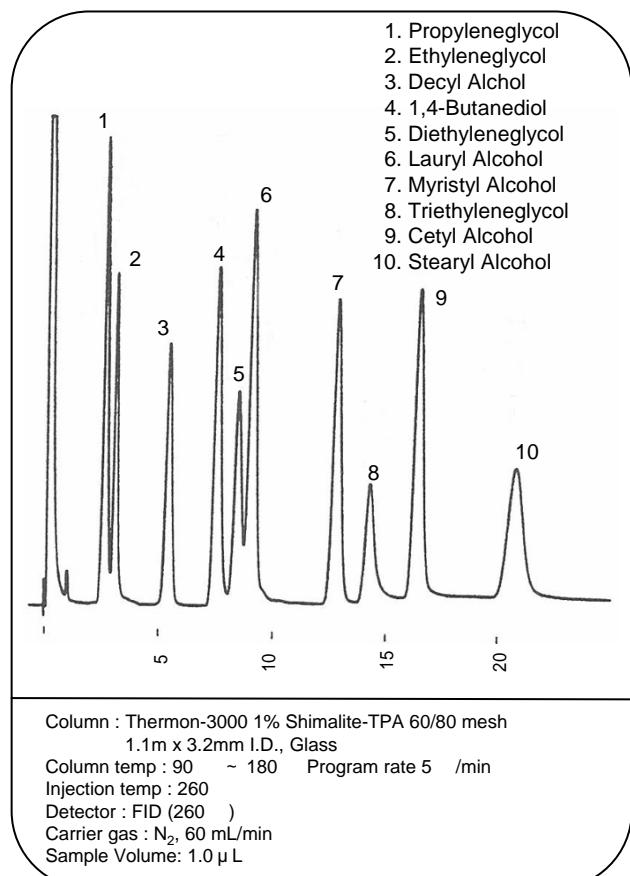

**Volatile Organic Compounds in Water**

Column : TSG-1 15% SHINCARBON-A 60/80 mesh  
3.1m x 3.2mm I.D., Glass  
Column temp : 60 ~ 180 Program rate 8 /min  
Injection temp : 200  
Detector : TCD (200 )  
Carrier gas : He, 40 mL/min  
Sample Volume: 1.0  $\mu$ L

**Trioxane in Water**

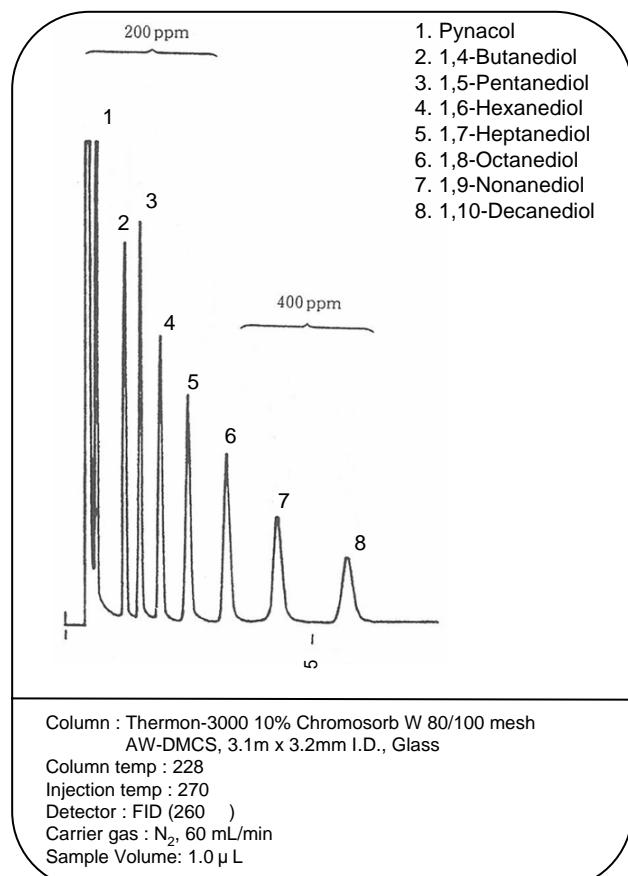

Column : TSG-1 15% SHINCARBON-A 60/80 mesh  
3.1m x 3.2mm I.D., Glass  
Column temp : 70  
Injection temp : 200  
Detector : FID (200 )  
Carrier gas : He, 50 mL/min  
Sample Volume: 1.0  $\mu$ L

### Glycols and Alcohols

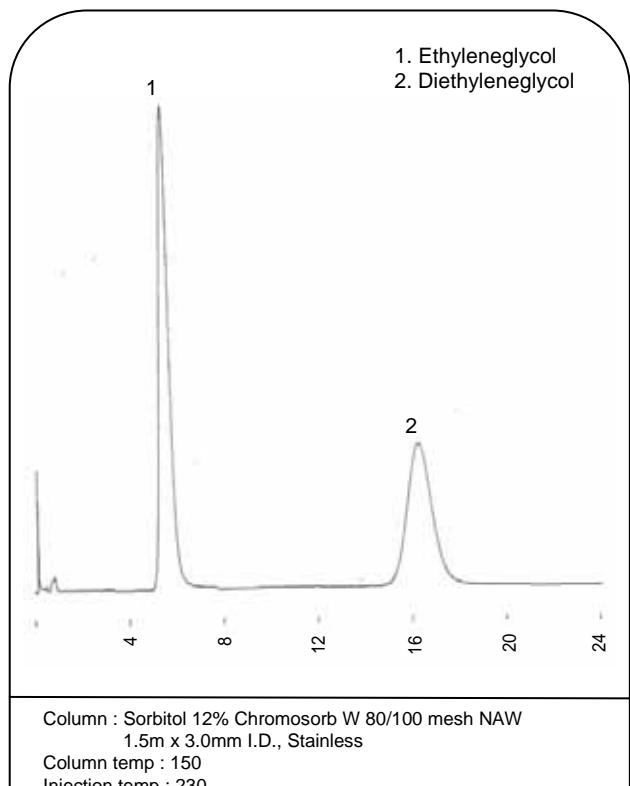

Column : Thermon-3000 1% Shimelite-TPA 60/80 mesh  
1.1m x 3.2mm I.D., Glass  
Column temp : 90 ~ 180 Program rate 5 /min  
Injection temp : 260  
Detector : FID (260 )  
Carrier gas : N<sub>2</sub>, 60 mL/min  
Sample Volume: 1.0 µL

### Diols

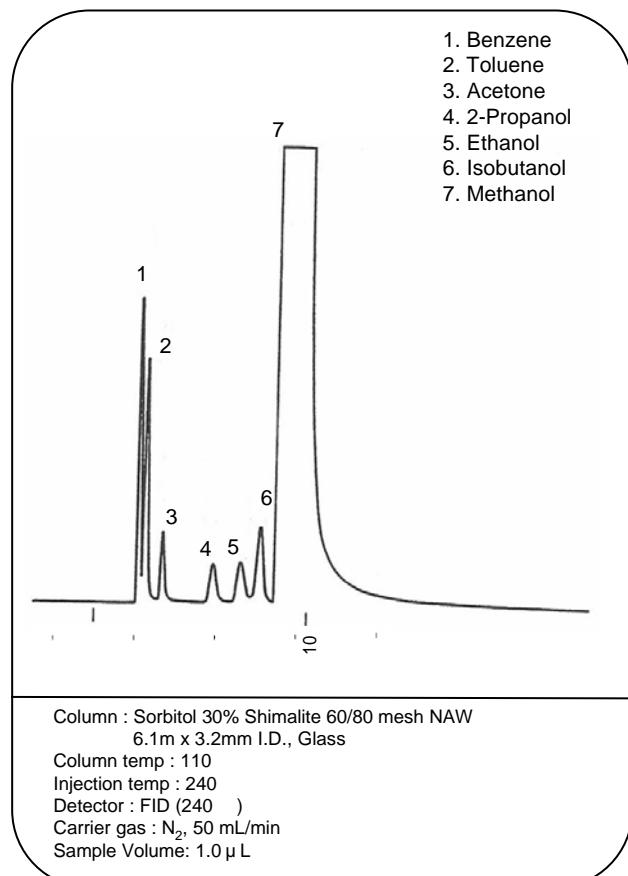

Column : Thermon-3000 10% Chromosorb W 80/100 mesh  
AW-DMCS, 3.1m x 3.2mm I.D., Glass  
Column temp : 228  
Injection temp : 270  
Detector : FID (260 )  
Carrier gas : N<sub>2</sub>, 60 mL/min  
Sample Volume: 1.0 µL

### Ethyleneglycol and Diethyleneglycol in Water

Column : Sorbitol 12% Chromosorb W 80/100 mesh NAW  
1.5m x 3.0mm I.D., Stainless  
Column temp : 150  
Injection temp : 230  
Detector : FID (230 )  
Carrier gas : N<sub>2</sub>, 60 mL/min  
Sample Volume: 1.0 µL

### Impurities in Methanol

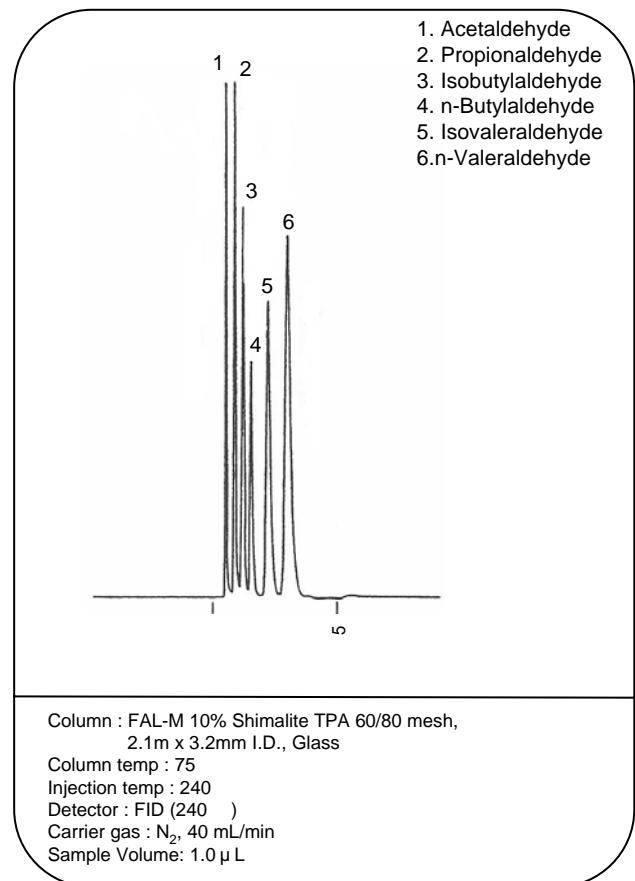

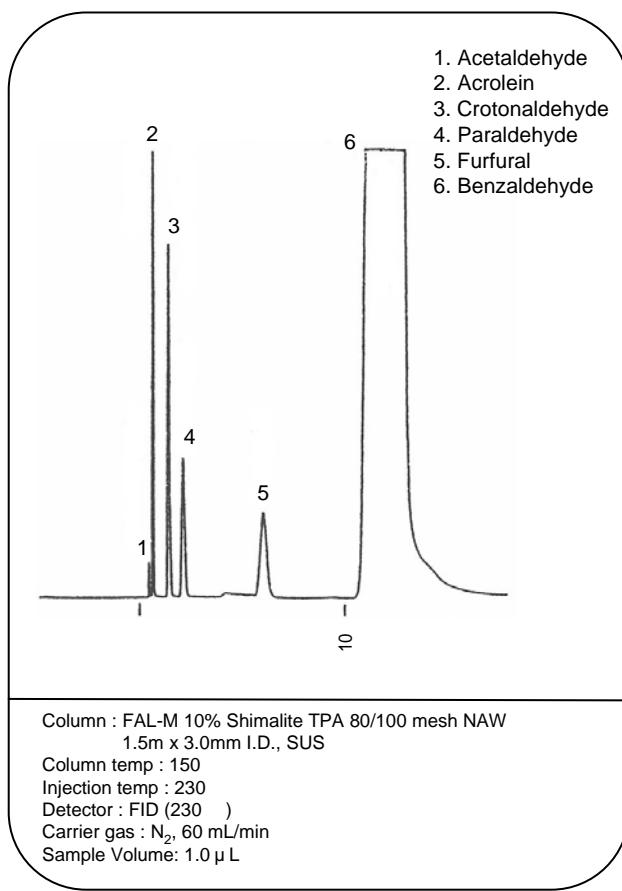

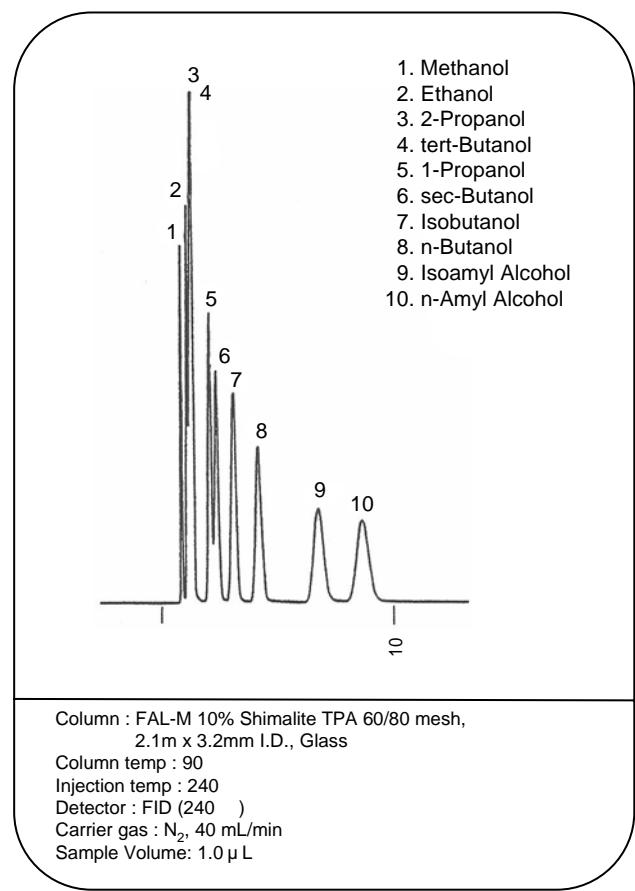

Column : Sorbitol 30% Shimelite 60/80 mesh NAW  
6.1m x 3.2mm I.D., Glass  
Column temp : 110  
Injection temp : 240  
Detector : FID (240 )  
Carrier gas : N<sub>2</sub>, 50 mL/min  
Sample Volume: 1.0 µL

**Saturated Aldehydes****FAL-M**

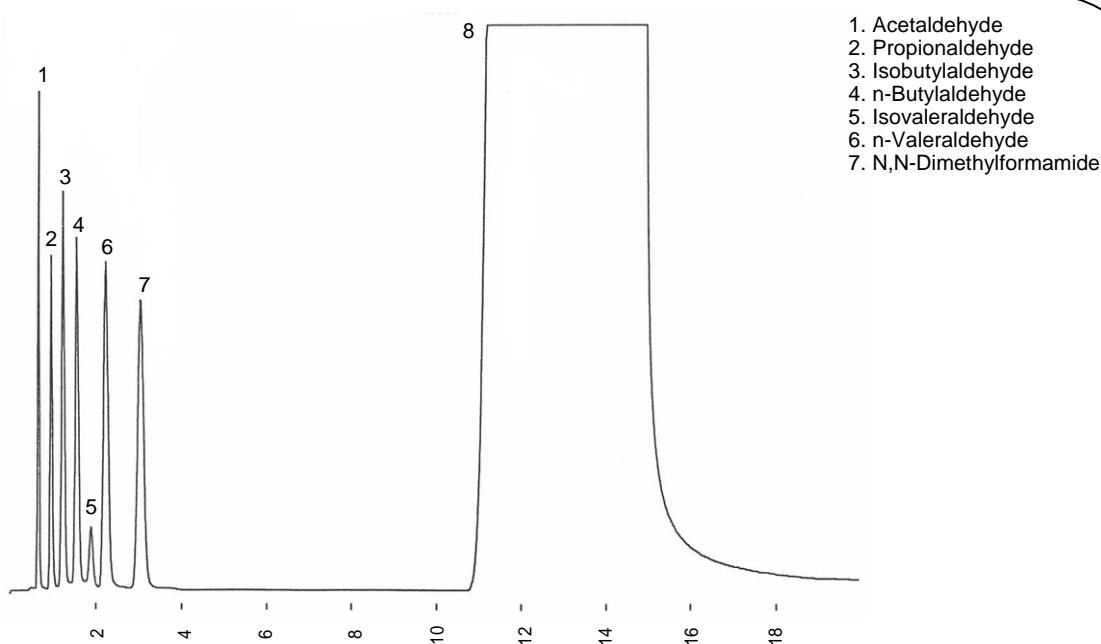

**FAL®-M** is a stationary phase having a structure of polyoxyethylenesorbitane ester. It is available for the analysis of lower free fatty acid, lower aldehyde, lower alcohol, essential oils and perfumes. Propionic acid and iso-butyric acid can be separated perfectly.

**Characteristics**

- 1) Normal and iso C<sub>2</sub> – C<sub>6</sub> fatty acids can be separated at equal interval.  
(See Lower fatty acids)
- 2) Aldehyde C<sub>2</sub> – C<sub>5</sub> can also be separated.
- 3) Low boiling point polar compounds in the wide range can be analyzed directly in the state of free body.

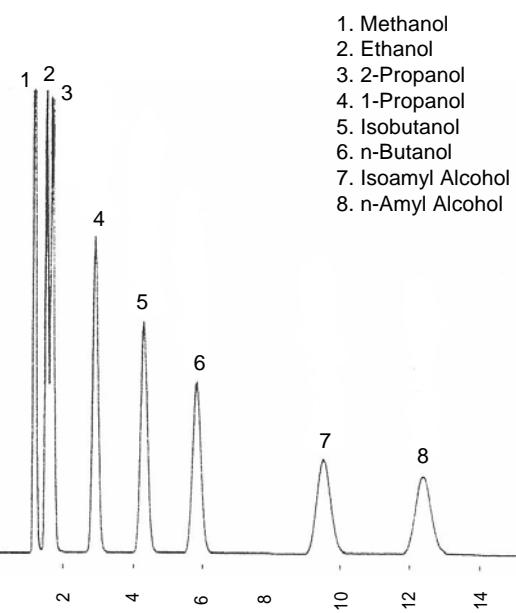

**Saturated Aldehydes****Alcohols**

### Saturated Aldehydes in Dimethylformamide

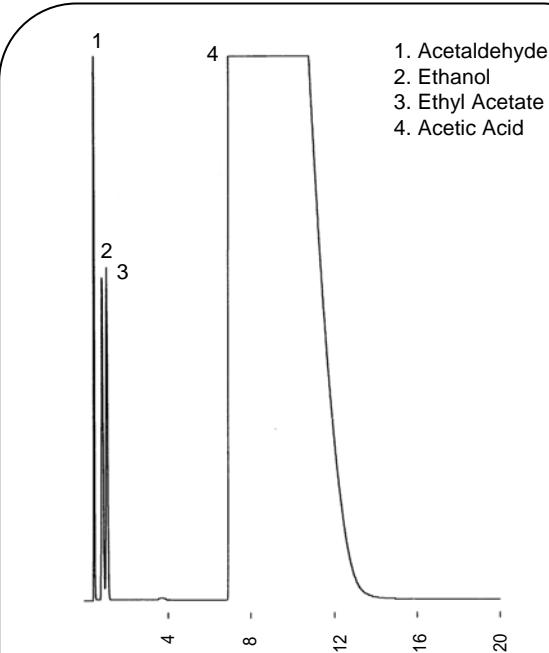

Column : FAL-M 10% SHINCARBON-A 80/100 mesh, 2.1m x 3.2mm I.D., Glass  
Column temp : 70  
Injection temp : 240  
Detector : FID (240 °C)  
Carrier gas : N<sub>2</sub>, 40 mL/min  
Sample Volume: 1.0 μL

### Alcohols

Column : FAL-M 10% SHINCARBON-A 80/100 mesh,  
2.1m x 3.2mm I.D., Glass  
Column temp : 80  
Injection temp : 250  
Detector : FID (250 °C)  
Carrier gas : N<sub>2</sub>, 40 mL/min  
Sample Volume: 1.0 μL

### Impurity in Acetic Acid

Column : FAI-M 10% SHINCARBON-A 80/100 mesh,  
2.1m x 3.2mm I.D., Glass  
Column temp : 70  
Injection temp : 230  
Detector : FID (230 °C)  
Carrier gas : N<sub>2</sub>, 50 mL/min  
Sample Volume: 1.0 μL

## Free Fatty Acids

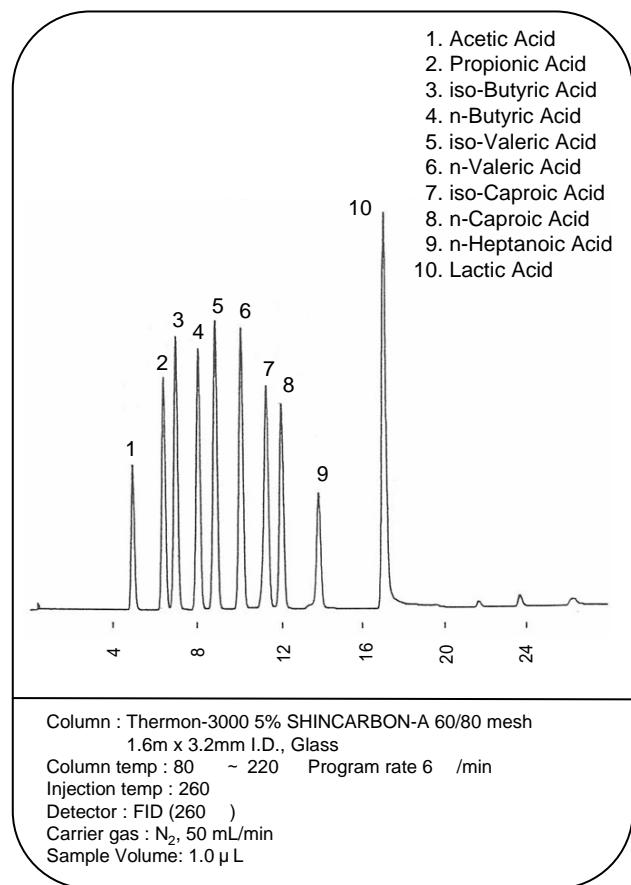

### Lower Free Fatty Acids and Lactic Acid in Water

#### Thermon-3000

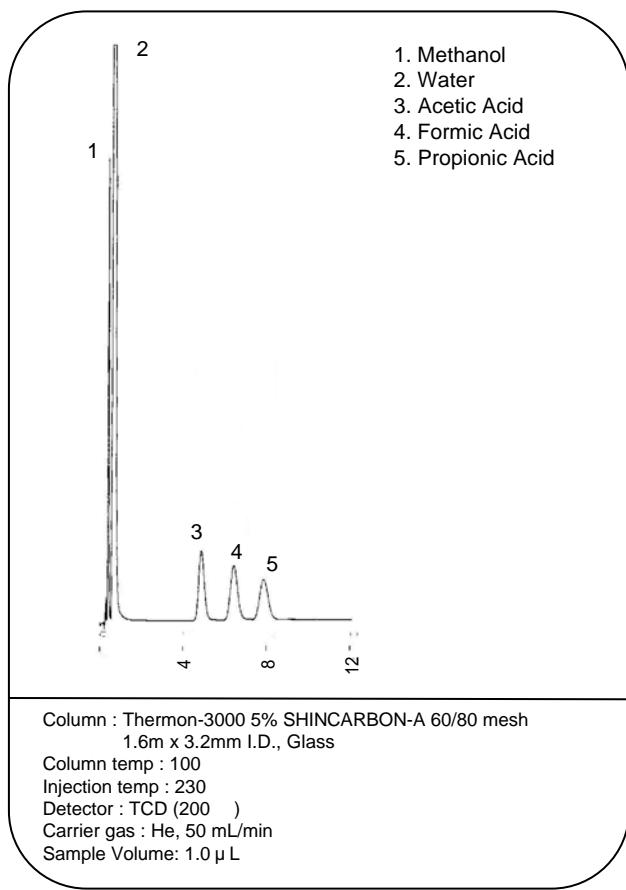

**Thermon-3000** is a packing material with the polyester (Alkylene glycol phthalic ester) structure.

#### Characteristics

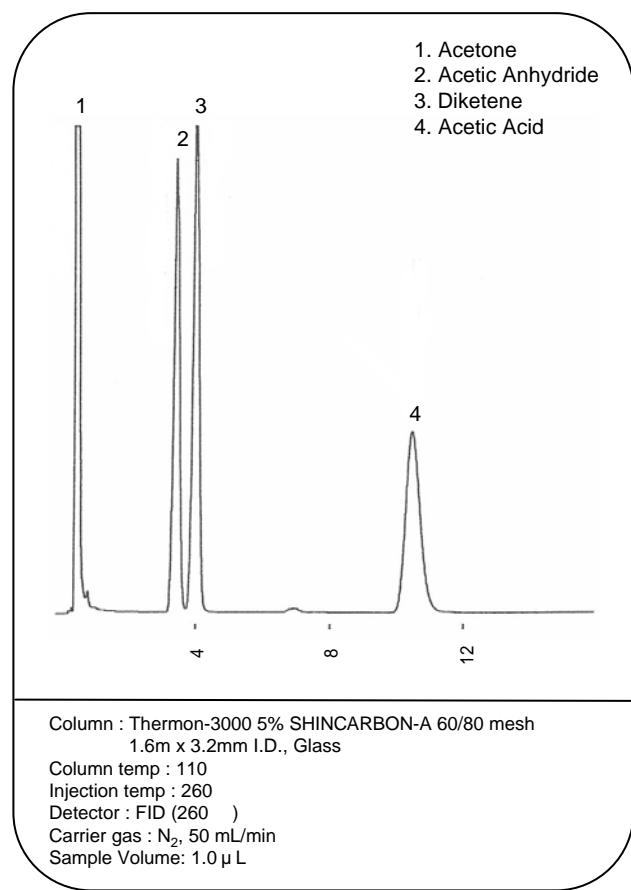

- 1) Maximum heat resistance temperature is 280 that is the highest temperature in polyester stationary phases.
- 2) The polarity is similar to PEG20M.
- 3) Thermon-3000 can be used for a wide usage from no polar samples to high polar samples.
- 4) SHINCARBON-A support gives high resolution for complicated organic acids.

### Standard Mixture of Fatty Acid Methyl Esters

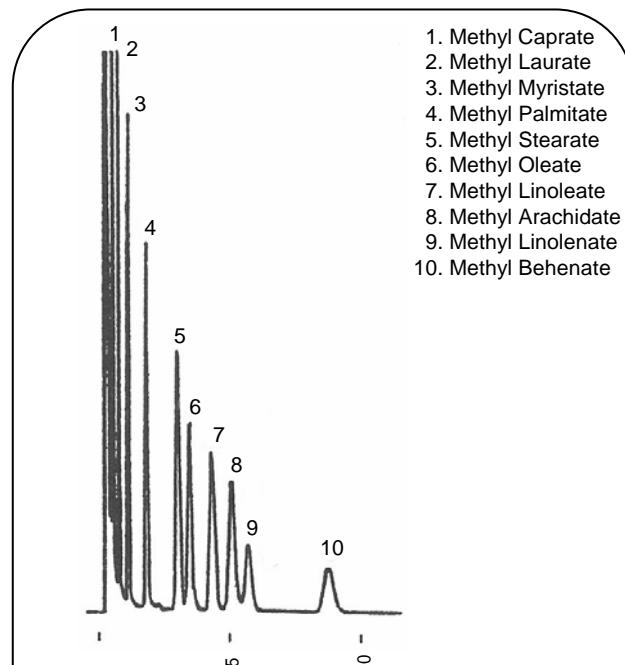

#### Advance-DS

The chemical structure of Advance-DS is similar to that of DEGS and is excellent in heat resistance. Advance-DS is especially effective in the separation of fatty acid methyl ester.

Advance-DS can also analyze chlorinated pesticide by high stability and high sensitivity.

#### Characteristics

- 1) Each peak of C<sub>18:0</sub>, C<sub>18:1</sub>, C<sub>18:2</sub>, C<sub>20:0</sub>, C<sub>18:3</sub> can be eluted at equal interval.
- 2) The maximum heat resistance temperature is 230 and it's 20 higher than DEGS.
- 3) The separation characteristics is stable.
- 4) Food additives can be analyzing similar to DEGS (see, food additives).

Column : Advance-DS 5% Chromosorb W 80/100 mesh AW-DMCS, 2.1m x 3.2mm I.D., Glass  
Column temp : 200  
Injection temp : 260  
Detector : FID (260 )  
Carrier gas : N<sub>2</sub>, 40 mL/min  
Sample Volume: 1.0  $\mu$ L

### Fatty Acid Methyl Esters in Serum

#### Shinchrom E71

#### (Analysis exclusively for higher fatty acid esters)

Shinchrom E71 is a packing material having a nitrile polyester structure for the analysis of fatty acid methyl esters(C<sub>10</sub> ~ C<sub>22</sub>).

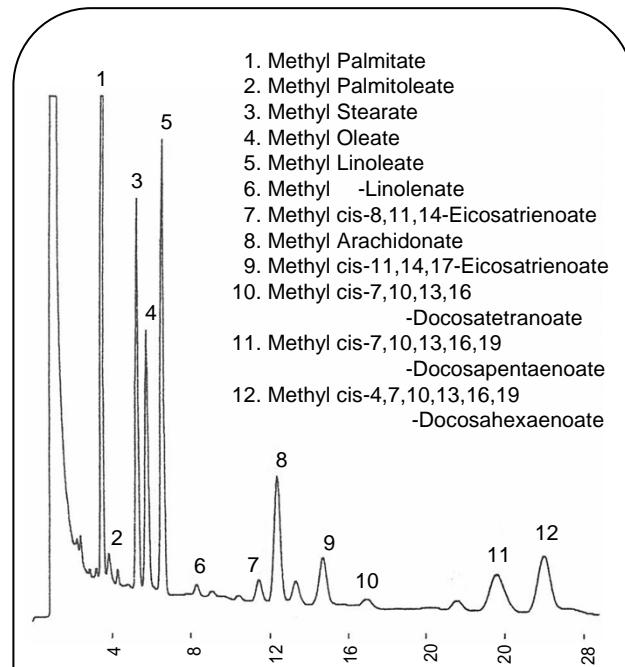

DEGS columns are used to separate fatty acid esters in generally. But it has some weak points described below.

- 1) The retention order of C<sub>18:2</sub>, C<sub>20:0</sub>, C<sub>18:3</sub> are not described.
- 2) The maximum heat resistance temperature is to 210 .

Shinchrom E71 is cleared these problems.

#### Characteristics

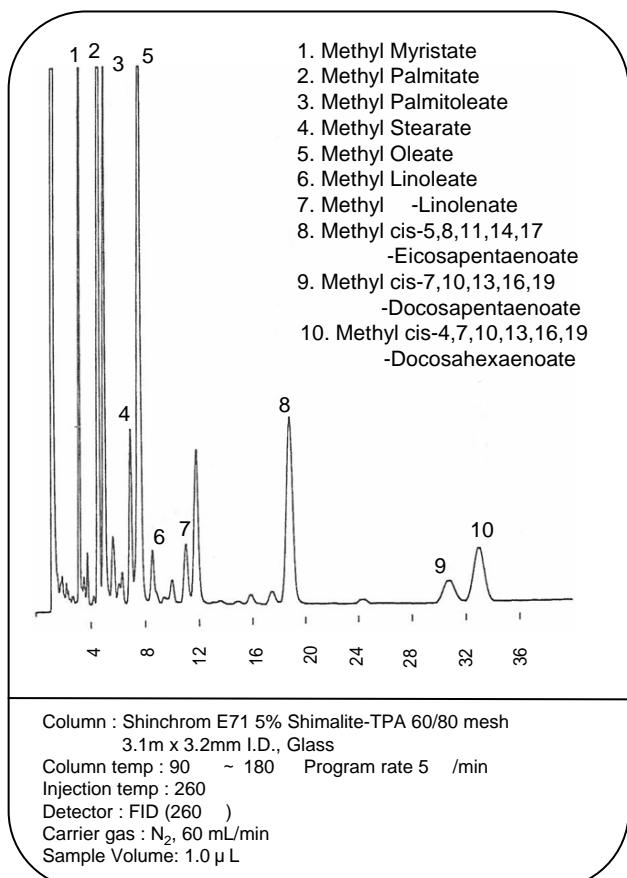

- 1) The retention order is C<sub>18:0</sub>, C<sub>18:1</sub>, C<sub>18:2</sub>, C<sub>18:3</sub>, C<sub>20:0</sub> are stable.
- 2) The separation characteristic are stable.
- 3) The maximum operation temperature is 250 .

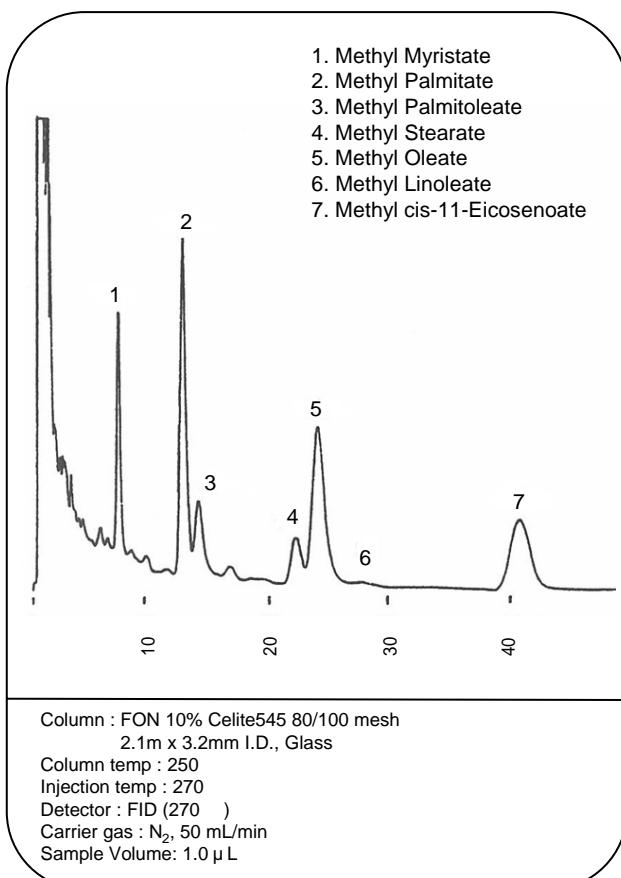

Column : Shinchrom E71 5% Shimalite 80/100 mesh AW 3.1m x 3.2mm I.D., Glass  
Column temp : 230  
Injection temp : 230  
Detector : FID (230 )  
Carrier gas : N<sub>2</sub>, 40 mL/min  
Sample Volume: 1.0  $\mu$ L

## Amines

### Thermon-3000 + KOH 2+2% Sunpak-N 60/100 mesh

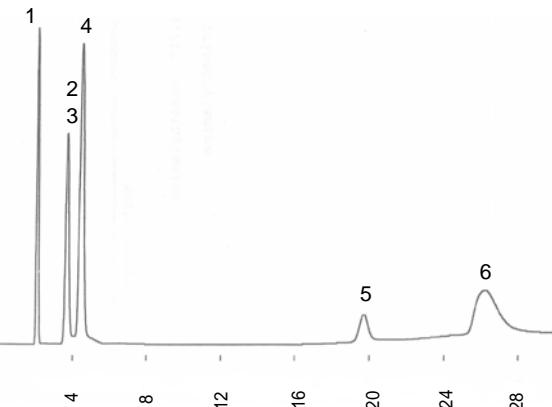

In trimethylamine offensive odor analysis, Diglycerol + Tetraethylenepentamine + KOH (15+15+2)% which can be completely separated colocalized monomethylamine and dimethylamine, also ethanol which is used as a solvent when is constructed calibration curve are generally used. However, the high sensitivity analysis was difficult, because the disorder of the baseline by the bleeding was large in case of comparatively low analysis temperature 70 . However, the high sensitivity analysis was difficult, because the disorder of the baseline by the bleeding was large in case of comparatively low analysis temperature 70 . Thermon-3000 +KOH (2+2)% Sunpak-N 60/100 is cleared these problems.

#### Characteristics

- 1) Mixture of ammonia, mono-methylamine, di-methylamine, tri-methylamine, water and ethanol can be separated completely in order.
- 2) Sunpak-N is composed of porous polymer beads, which is adequate for analyzing the aqueous solution.
- 3) The maximum service temperature is 250 . Low bleeding and stable base-line enables the high-sensitive analysis.
- 4) Tri-methylamine over 30 ppb in air can be analyzed directly (without cold-trap system), by utilizing the Needle trap extraction tools (NeedlEx for tri-methylamine).

## Sulfur Compounds

### Sulfur Compounds in Lower Hydrocarbons

#### Sunpak-S

Sunpak-S is a suitable the packing material for analyzing sulfur compounds in lower hydrocarbons (C1 ~ C4).

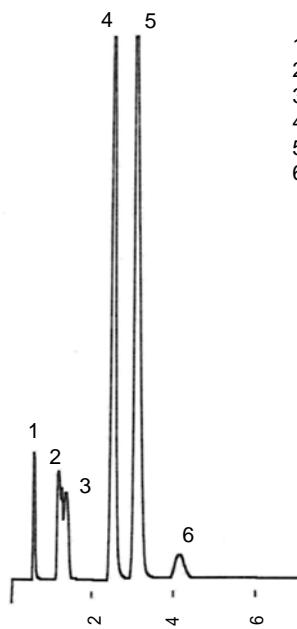

1,2,3-TCEP, PPE-5rings and , '-ODPN are used for the analysis of sulfur compounds. However, carbonyl sulfide can't be separated from methane, ethylene and ethane by 1,2,3-TCEP and PPE-5rings. And also carbonyl sulfide and hydrogen sulfide can't be separated from methane and ethylene by , '-ODPN.

The quenching phenomenon happens in FPD detector when sulfur compounds and too much hydrocarbons are eluted at the same time, so correct qualitative analysis of sulfur compounds can not be achieved. Therefore, SUNPAK-S enabled hydrocarbons and sulfur compounds to be separated completely.

#### Characteristics

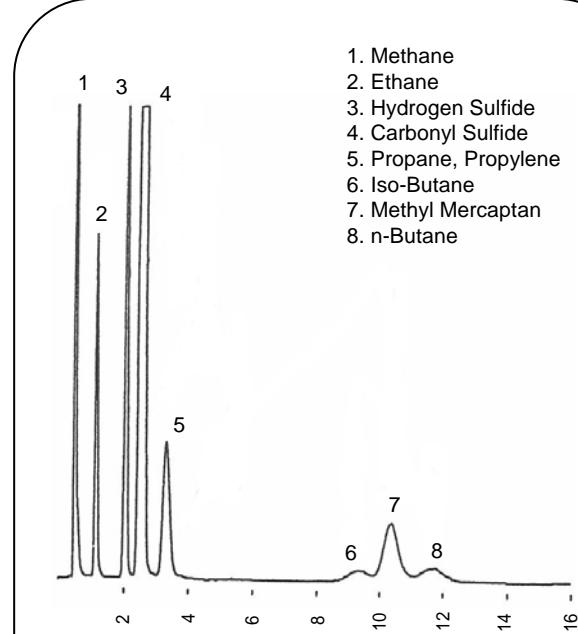

- 1) Carbonyl sulfide and hydrogen sulfide can be separated from methane, ethane, ethylene, propane and propylene by Sunpak-S, minor sulfur compounds can be detected.
- 2) Methyl mercaptane can be eluted between isobutane and n-butane.

### Sulfur Compounds in Lower Hydrocarbons

Sample Volume: 0.5 μL

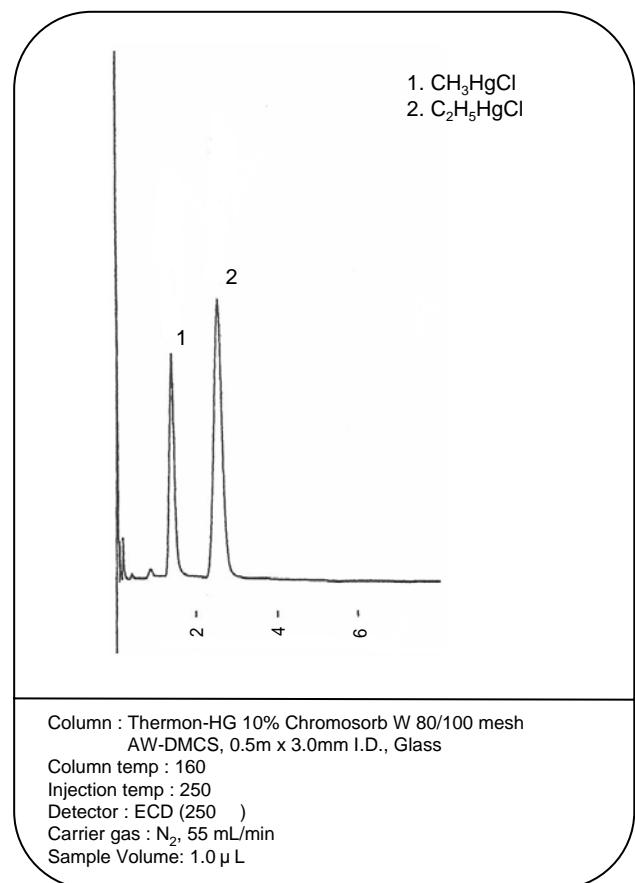

## Methyl Mercuric Chloride and Ethyl Mercuric Chloride

### Thermon-HG

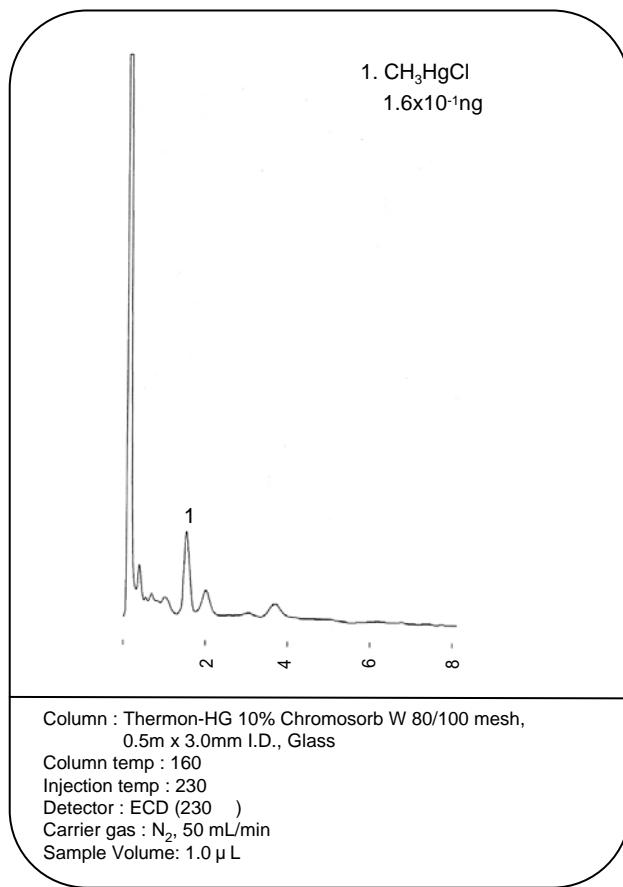

**Thermon-HG** is a packing material having a structure of polyester for analysis of organic mercury compounds.

#### Characteristics

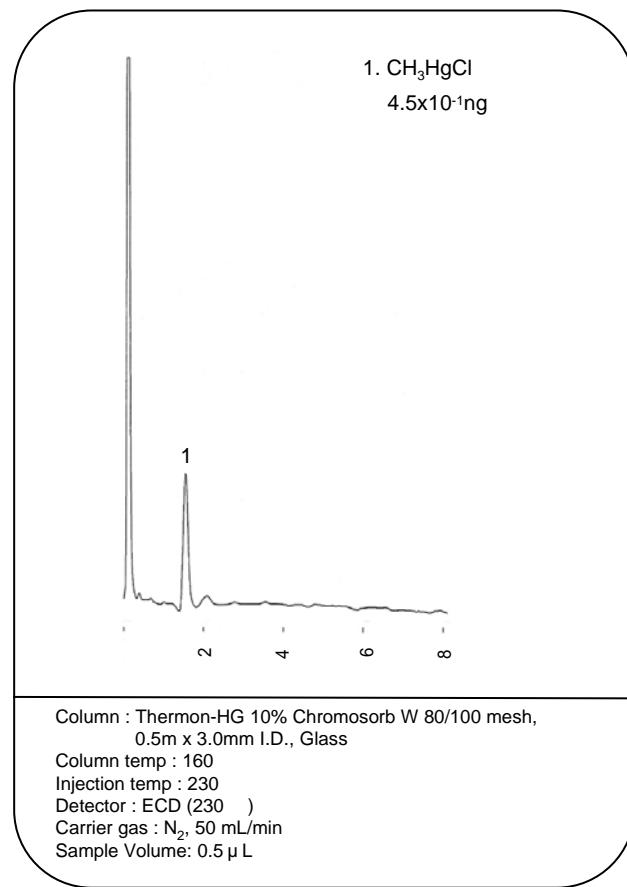

- 1) Compared with DEGS, the low bleeding of Thermon-HG stationary phase results in higher sensitivity of detection (3 to 5 times). As the result, the time of sample condensation can be shortened by half.
- 2) The conditioning time can be shorten.
- 3) Thermon-HG is excellent in thermostability compared with DEGS. As a result, Life is longer than DEGS.

## Cresol Isomers and Xylenols

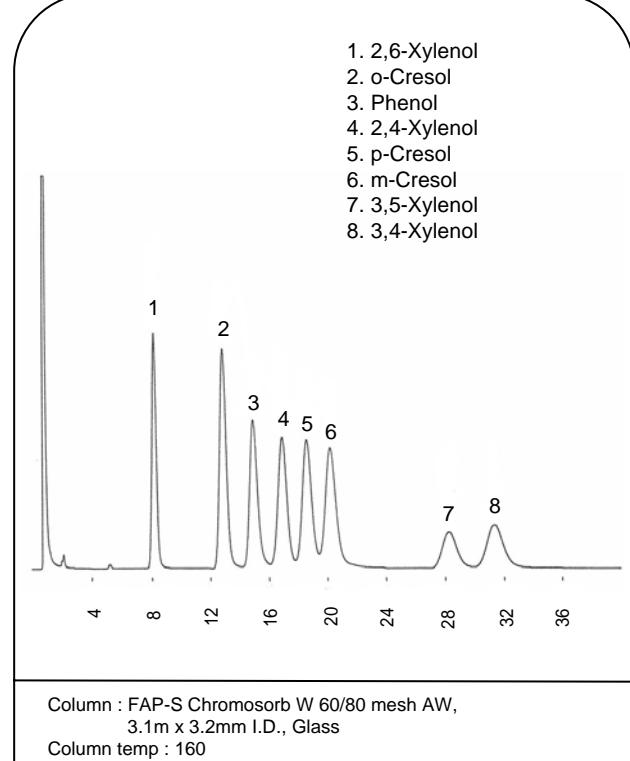

### FAP-S

**FAP-S** is a packing material coated with stationary phase which has a nitro-ester structure and can be used for the analysis of cresol isomers and alkyl phenols.

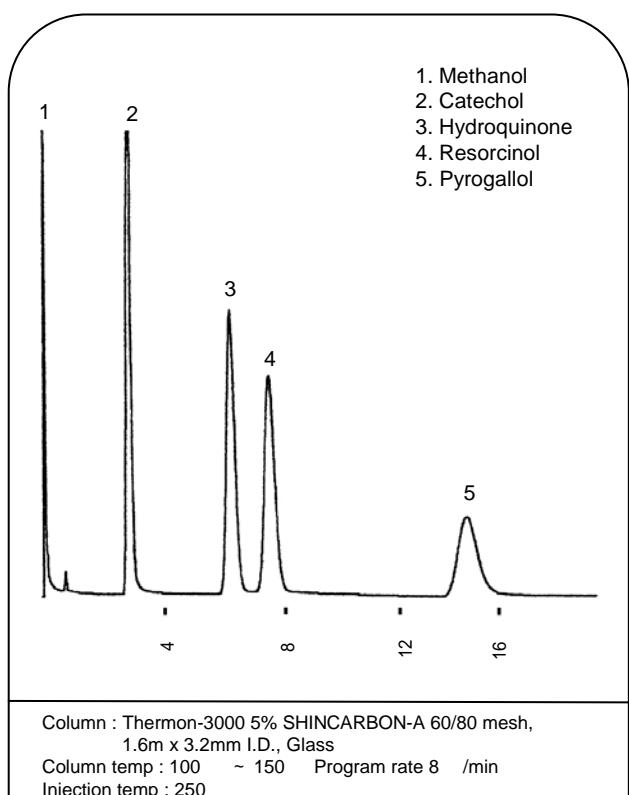

GC method is authorized for the separation of cresol isomers by food hygiene law. Lanoline and tricresyl phosphate (TCP) are used as a stationary phase for these analysis, and occasionally  $H_3PO_4$  may be added depending on the purpose. For cresol analysis, the operation temperature is needed at 160  $^{\circ}C$ . But the stationary phases described above are bleedied and unstable at the temperature. The problem is cleared by **FAP-S**.

### Characteristics

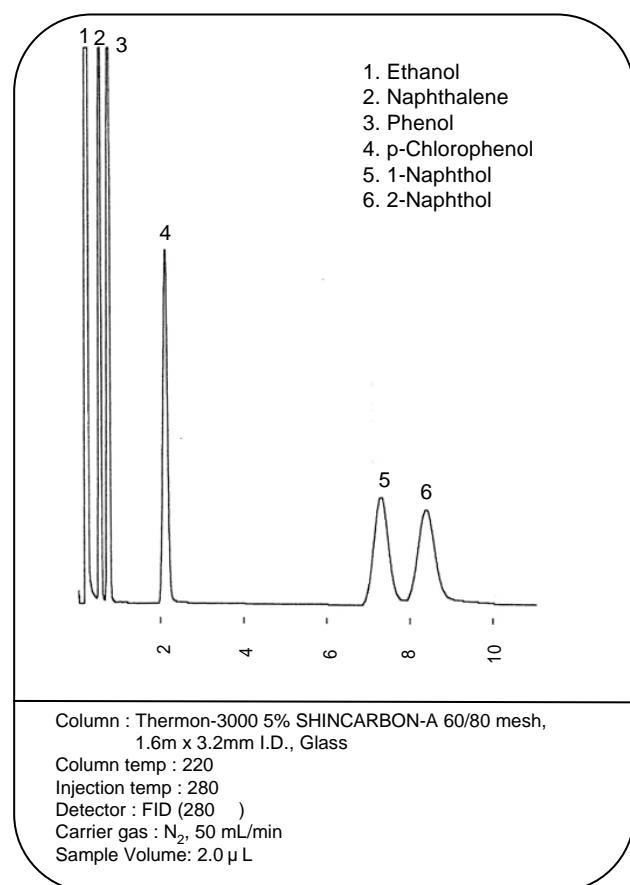

- 1) The maximum operation temperature is 180  $^{\circ}C$ .
- 2) High sensitive analysis is possible at 160  $^{\circ}C$ .
- 3) The analysis of minor compounds can be possible in the various fields.

Ethanol	61, 63, 64, 65, 66, 67, 68, 73, 74, 85, 88, 89
Ethyl Acetate	60, 61, 62, 63, 64, 68
Ethyl Cellosolve	61, 63
Ethyl Cellosolve Acetate	61
Ethyl Cinnamate	89
Ethyl Icosapentate	72
Ethyl Mercaptan	77, 78, 79
Ethylamine	73
Ethylbenzene	55, 58, 60, 61, 62
Ethylene	50, 51, 52, 53, 54, 55, 76, 79
Ethyleneglycol	66
Ethyleneoxide	88
Ethylparathion	82
m-Ethyltoluene	55
Etiocholanolone	87
Eugenol	89
Fluorene	84
Formaldehyde	65
Formic Acid	65, 69, 70
Furfural	67
G	
Geraniol	89
H	
Heliotropin	89
Helium	51, 52
n-Heptane	53, 55

## Application Index

<b>H</b>	
1,7-Heptanediol	66
n-Heptanoic Acid	69, 70
Hexane	63, 72
n-Hexane	53, 55, 56, 60, 61, 62, 76, 84
1,6-Hexanediol	66
Hydrogen	50, 51, 52
Hydrogen Sulfide	77, 78, 79
Hydroquinone	85
<b>I</b>	
-Inone	89
Inositol	88
Isoamyl Alcohol	60, 61, 63, 64, 67, 68
Isobornyl Acetate(Citronellol)	89
Isobutanol	60, 61, 63, 64, 66, 67, 68
Isobutyl Acetate	60, 62
Isobutylaldehyde	67, 68
Isopropylbenzene	58
Isovaleraldehyde	67, 68
<b>K</b>	
KC300:KC400:KC500:KC600=1:1:1:1 each 1.0ppm	81
<b>L</b>	
Lactic Acid	69
Lauryl Alcohol	66
Limonene	89
Linalool	89
Linalyl Acetate	89
Litho Cholate	86
<b>M</b>	
Mannitol	88
m-Cresol	85
Menthol	89
Methacrylic Acid	88
Methane	50, 51, 52, 53, 54, 55, 73, 76, 78, 79
Methanol	60, 61, 63, 64, 65, 66, 67, 68, 69, 74, 84, 85
1-Methoxy-2-Propanol	63

## Application Index

<b>M</b>	
Methyl Acetate	60, 61
Methyl Arachidate	71, 72
Methyl Arachidonate	71
Methyl Behenate	71, 72
Methyl Caprate	71, 72
Methyl Cellosolve	61, 63
Methyl Cinnamate	89
Methyl cis-11,14,17-Eicosatrienoate	71
Methyl cis-11-Eicosenoate	72
Methyl cis-4,7,10,13,16,19-Docosahexaenoate	71
Methyl cis-4,7,10,13,16,19-Docosahexaenoate	72
Methyl cis-5,8,11,14,17-Eicosapentaenoate	72
Methyl cis-7,10,13,16,19-Docosapentaenoate	71, 72
Methyl cis-7,10,13,16-Docosatetraenoate	71
Methyl cis-8,11,14-Eicosatrienoate	71
Methyl Erucate	72
Methyl Ethyl Ketone	60
Methyl Formate	65
Methyl Iodide	88
Methyl Isobutyl Ketone	62
Methyl Laurate	71, 72
Methyl Linoleate	71, 72
Methyl Linolenate	71
Methyl Mercaptan	77, 78, 79
Methyl Myristate	71, 72
Methyl n-Butyl Ketone	60, 61
Methyl Oleate	71, 72
Methyl Palmitate	71, 72
Methyl Palmitoleate	71, 72
Methyl Stearate	71, 72
Methyl -Linolenate	71, 72
Methyl -Linoleate	72
Methylamine	74
Methyldemethon	82
Methylparathion	82
Monimethylamine	73
Monoethanolamine	73
Monomethylamine	73, 74
Myristyl Alcohol	66

## Application Index

<b>N</b>	
Naphthalene	85
1-Naphthol	85
2-Naphthol	85
Nitrogen	50, 51, 89
Nitrous Oxide	50, 53
n-Nonane	53, 56, 83
1,9-Nonanediol	66
n-Nonyl Aldehyde	89
<b>O</b>	
n-Octane	53, 56, 88
1,8-Octanediol	66
n-Octyl Aldehyde	89
Oxygen	50, 51
<b>P</b>	
Paraldehyde	67
Parathion	82
n-Pentane	51, 53, 54, 55
iso-Pentane	53, 54, 55
1,5-Pentanediol	66
Perillaldehyde	89
Phenol	85
m-Phenylenediamine	74
o-Phenylenediamine	74
p-Phenylenediamine	74
-Pinene	89
-Pinene	89
Pregnanediol	87
Pregnanetriol	87
Propane	51, 53, 54, 55, 73, 76, 78, 79
Propanediol(Trimethyleneglycol)	84
1-Propanol	61, 63, 64, 65, 67, 68
2-Propanol	60, 61, 62, 63, 64, 65, 66, 67, 68, 89

## Product Index

P	
Propionaldehyde	67, 68
Propionic Acid	69, 70, 88
iso-Propyl Iodide	88
n-Propylbenzene	58, 60
Propylene	51, 53, 54, 55, 76, 79
Propyleneglycol	66, 84
Propyleneoxide	88
p-Xylene	58
Pynacol	66
Pyrene(1%)	56
Pyrogallol	85
R	
Resorcinol	85
Rose-P	89
S	
Sodium Cyclamate Nitrite	83
Sorbic Acid	83
Sorbitol	88
Stearyl Alcohol	66
Styrene	60, 61
Styrene Monomer	58
Sulfur Dioxide	78
T	
1,1,2,2-Tetrachloroethane	62
Tetrachloroethylene	62, 75, 76
Tetrahydrofuran	60, 61
allo-THB	87
THB	87
THE	87
THF	87
Toluene	55, 56, 58, 60, 61, 62, 66
trans-Stilbene	83
1,1,1-Trichloroethane	62, 75, 76

## Product Index

<b>T</b>	
1,1,2-Trichloroethane	76
Trichloroethane	76
1,1,1-Trichloroethylene	75
Trichloroethylene	60, 62, 75, 76
n-Tridecane	56
Triethylamine	73
Triethyleneglycol	66
Trimethylamine	73, 74
1,2,4-Trimethylbenzene	55
Trioxane	65
<b>U</b>	
n-Undecane	56
<b>V</b>	
n-Valeraldehyde	67, 68
iso-Valeric Acid	69, 70
n-Valeric Acid	69, 70
Vanillin	89
Vinylchloride	76
<b>W</b>	
Water	53, 63, 64, 65, 69, 70, 73, 74, 89
<b>X</b>	
m,p-Xylene	55, 60, 61, 62
m-Xylene	58
o-Xylene	58, 60, 61, 62, 88
Xylene	55
2,4-Xylenol	85
2,6-Xylenol	85
3,4-Xylenol	85
3,5-Xylenol	85
Xylitol	88
